FG-19-83
July 1983

REFERENCE TABLES ON WHEAT, CORN AND TOTAL COARSE GRAINS SUPPLY-DISTRIBUTION FOR INDIVIDUAL COUNTRIES

This publication contains the latest available supply and distribution estimates for wheat, corn and total coarse grains for each country in the Foreign Agricultural Service grains data base. Estimates are continually being reviewed; the contents herein reflect information available through June 15, 1983, and correspond to the world summaries released the same date in FG-16-83, World Grain Situation/Outlook. The data are prepared or estimated on the basis of official statistics of foreign governments, other foreign source materials, field reports from U.S. Agricultural Counselors, Attaches and Foreign Service Officers, results of office research and related information.

An updated computer tape containing the complete 20-year data base for all grains including rice, as well as data for various other agricultural commodities, titled "Foreign Production Supply and Distribution of Agricultural Commodities" is issued twice yearly and can be purchased through the National Technical Information Service (NTIS), Computer Production Division, Department of Commerce, Springfield, Virginia 22161.

This circular was prepared by the Grain and Feed Division, Commodity Programs, FAS/USDA, Washington, D.C. 20250. Further information may be obtained by writing the Division or telephoning (202) 447-2009.

Notes and Explanations of the Data Base

1. The year in parentheses in the far left column represents the "world" production year beginning July 1 of the year indicated. Thus, 1983 production data include all harvests occurring within July-June 1983/84, except those small grain crops from the early harvested Northern Hemisphere areas which are "moved forward"; i.e., the May 1983 harvests in such areas as India, North Africa and the southern United States are actually included in the 1983/84 accounting period that begins July 1, 1983.
2. The year shown without parentheses represents the marketing year, and refers to the 12-month period following harvest. For major producing Southern Hemisphere countries, production that occurred in the "world" production year 1982, for example, may be distributed in the country's 1983/84 marketing year. The marketing year designated for some country series has changed over the historical period as a result of a change in the official marketing year or a change in the official data source.
3. For countries where stocks data are unavailable, "total consumption" represents apparent consumption; i.e., consumption inclusive of annual stock changes.
4. The final three columns to the extreme right side of each page represent the July-June trade period. These columns are often used in aggregations of individual countries, allowing trade data to be expressed during a common 12-month time frame. These columns are preceded by the appropriate year designation for each line; e.g., the year designated 84 covers trade during the July 1983-June 1984 time period.
5. Coarse grains include corn, barley, sorghum, oats, rye, millet and mixed grains.
6. The complete USDA data base as compiled by the Foreign Agricultural Service's Grain and Feed Division currently covers the production years 1960 through 1983.
7. Reference tables on rice supply-distribution for individual countries appear in FG-22-82, published in September 1982.
8. Conversion factors:
 - 1 hectare = 2.471 acres
 - 1 metric ton = 2204.622 pounds
 - 1 metric ton = 36.7437 bushels of wheat
 - 1 metric ton = 39.368 bushels of corn

FOREIGN AGRICULTURE CIRCULARS

The Foreign Agricultural Service issues a number of Foreign Agriculture Circulars during the year on various commodities and export services for the food and agricultural trade, as well as specialized publications pertaining to individual commodities.

HOW TO ORDER: Check the title of each publication you wish to order. Remit a check for the total amount payable to the Foreign Agricultural Service. Only checks on U.S. banks, cashier's checks, or international money orders will be accepted in payment. **NO REFUNDS CAN BE MADE.** Mail this form to:

Foreign Agricultural Service

USSR Grain Situation and Outlook

Recent developments suggest that Soviet grain import demand in 1983/84 may fall short of the high levels of the past 2 years. Another month has passed with little Soviet buying activity. In addition, there still are no serious problems with the 1983 Soviet grain crop.

Soviet Import Estimate Cut

The estimate of 1983/84 Soviet grain imports has been cut by 5 million tons to 30 million. This would be the lowest level of imports since the record production year of 1978/79. As of July 12, reported grain sales to the Soviets from all origins for delivery in the 1983/84 marketing year (July-June) are believed to total less than 5 million tons. Purchasing activity this summer has been the slowest in a number of years. Purchases of new-crop Northern Hemisphere grain supplies have been particularly slow. With ready access to large world grain supplies, the Soviets may have decided to delay imports, leaving their domestic stocks low and depend instead on the world's major suppliers to hold the grain.

Much of the expected shipments to the USSR during the early months of 1983/84 are thought to be no more than cleaning up old business. However, new-crop shipments from Canada are likely to start in August, although no sales have yet been reported for the third year of the Canadian-USSR agreement.

The projection of wheat imports at 18 million tons is down 2 million from last month's estimate and 3 million from a year ago. This would still be the third largest Soviet wheat imports on record. The projection for this year's Soviet wheat crop points to little improvement over a year ago; consequently, wheat imports are expected to continue large. However, quality could be somewhat better. Thus, more of the crop could be used by the milling sector, lessening the need for imports.

Early prospects for a bumper USSR coarse grain harvest along with continued Soviet absence from the world's coarse grain market suggests that coarse grain imports may sink to the lowest level in 5 years. The current estimate of 11 million tons would be the lowest since 1978/79.

1983/84 Use Increases

Total grain use for 1983/84 is projected at 221 million tons, including an allowance of 20 million tons for dockage and waste. Non-feed domestic uses (industrial use, seed and food) are projected to total 78 million tons, basically unchanged from the levels of recent years. Feed use of grain is forecast to register a 4 percent increase, rising to an estimated 123 million tons. This would still be short of the peak level of about 125 million estimated for 1978/79.

1982/83 Estimates Adjusted

A slowdown in the late season pace of Soviet imports has prompted a one-million-ton reduction in the import estimate for 1982/83 to 33 million tons. The estimates of wheat and coarse grain imports each have been reduced 500,000 tons to 20.5 million and 11.5 million tons, respectively. Estimated domestic use is basically unchanged as the Soviets may have relied on some limited supplies from grain inventories to maintain consumption levels.

Total grain utilization in 1982/83, estimated at 214 million tons, was up from the year earlier level. With record or near record livestock inventories during much of the 1982/83 marketing year and some late season improvement in slaughter weights and milk yields, projected grain for feed use was placed at 118 million tons, an increase of 5 percent. This increase from the preceding year's low level takes into account some expected improvement in feeding efficiencies, a mild winter which reduced grain for feed needs, and an early spring which encouraged a return to pasturing.

U.S.-USSR LTA Developments

Representatives of the U.S. and USSR are scheduled to meet for the third time July 26-27 in Vienna, Austria to continue discussions on a possible new long term grain agreement. The last session was held in Moscow on June 20-22.

Procurement Price Changes Announced

Soviet agricultural procurement price changes are not unusual, the last adjustments occurred in 1981. However, it appears that the Soviets are using strong signals through plans and price policies to encourage increased production and procurement of feed grains. Corn prices were increased by an average of 33 percent as of January 1983, and in absolute value now exceed wheat procurement prices. Increases in barley procurement prices were similarly dramatic. These changes are designed to make feed grain production more profitable as the Soviets strive to expand meat production through increased animal inventories and improved slaughter weights.

By contrast, the prices charged for farm inputs are being moderated. Farms are entitled to a "reimbursement from the state budget" that appears to freeze the effective price of tractors, mineral fertilizers, motor vehicles, trailers, and other agricultural machinery at January 1, 1982 levels.

USSR: State Procurement Prices for Grain

	(Kazakhstan, Kirgizia)	72	100
Corn	(USSR)	90	120

1/ Zakupki Sel'skokhozyaivennykh Produktov, No. 6, 1983.

Forage Outlook Good

The harvest of forage crops continues well ahead of the average pace of the last three years as the area of sown and perennial grasses cut was 22 percent higher by July 4 than the average for the previous 3 years. While cuttings have been carried out almost a week ahead of the 1980-82 average, production of hay is running nearly 2 weeks ahead and that of haylage is roughly 8 days ahead of the average for the last 3 years. This could be a result of both higher yields and more rapid movement of hay cuttings out of the fields. Despite the favorable developments thus far, it remains very early in the feed-crop harvesting season.

Livestock Inventories High

As of June 1, 1983, cattle, hogs, and poultry numbers in the socialized sector had reached records of 96.8 million, 58.6 million, and 778.8 million, respectively. Compared to a year earlier, cattle numbers gained by 1.5 percent, hogs by 5 percent, and poultry by 3 percent. Cow numbers at 29.9 million, fell slightly.

USSR Livestock Numbers on State and
Collective Farms, June 1, 1979-1983

Year	Cattle	Cows	Hogs	Poultry
--Million Head--				
1979	93.7	29.7	56.6	695.7
1980	94.0	29.8	55.6	708.9
1981	94.8	29.9	56.3	741.8
1982	95.4	30.0	55.8	757.7
1983	96.8	29.9	58.6	778.8

Based on changes in livestock numbers between May 1 and June 1, there was one major diversion from normal inventory patterns for the month of May. Hog numbers gained 1.2 million head this May, the largest gain made in this month in 5 years. This would indicate that the Soviets are building and attempting to maintain the hog population at the current unprecedented high level.

1983 Crop Estimate Unchanged

No major changes have occurred in the USSR in the last month affecting either the overall yield potential or area of the 1983 grain crop. Thus, the 200-million-ton estimate and its components remain unchanged (85 million wheat; 103 million coarse grains, and 12 million miscellaneous grains and pulses). Winter grain output is estimated at 55 million tons and spring grain at 145 million.

The estimated crop area of 122 million hectares is the smallest since 1972. The wheat area of 52 million hectares is the smallest in three decades. Coarse grains at 61 million hectares is nearly 3 million more than last year and only slightly smaller than the record in 1979. Winter grains are estimated at 29 million hectares, while spring grains are estimated at 93 million hectares.

Yield prospects are unchanged, as local weather occurrences that might affect production have been offsetting. Conditions across northern European USSR remain favorable. Some lodging has been reported in the Upper Volga Valley and the Northwest, but lodging often is associated with good yields in the USSR. Heavy rainfall was reported across northern USSR in late June. Cold temperatures, unusual for this time of year, with isolated pockets of frost extending from the northern Ukraine northeastward, caused little if any crop damage. The coolness, however, slowed crop development. In southern European USSR, some areas received up to 50 mm of rain in mid-June which enabled the winter grains to maintain yield prospects in all but the northern North Caucasus, which has been deficient in moisture since last fall. Scattered showers from mid-June to early-July gave temporary relief from moisture stress for spring crops, especially for corn now approaching the tasseling stage.

Dry conditions have now returned throughout much of the area. About 50 percent of Soviet corn production is in the North Caucasus and eastern Ukraine. In the major spring wheat area east of the Ural Mountains conditions remain quite good. Prospects are also good in some of the marginal producing regions of eastern Kazakhstan, in the Urals region and parts of Western Siberia. North Central Kazakhstan, since about June 20, has had more seasonal weather, high temperatures and only scattered showers. Some localities had 3-7 consecutive days of temperatures as high as 36°C. At night, however, temperatures cooled, giving the plants some relief. Because this hot weather came during the early stage of crop development, the impact on yield prospects was probably minimal. More normal temperatures have since returned to the area. Seeding took place under quite favorable soil moisture conditions this year in most of the New Lands. The crop, has not been stressed and probably has not developed a deep root system.

The 1983 grain harvest is 1-2 weeks ahead of schedule. Thus, the crop season which began about 2 weeks ahead of normal continues to be advanced. While it is early for meaningful production figures, the republics in Soviet Central Asia reportedly are achieving good yields.

Prepared by the USDA Interagency Task Force on the USSR Grain Situation.

WORLD GRAIN SITUATION/OUTLOOK

Improving crop prospects during the past month in a number of countries have resulted in a decrease in world grain import demand for 1983/84, particularly for coarse grains. More complete information on exports by destination from the major exporting countries has also led to a further decrease in estimated imports by several countries for the 1982/83 season. Key developments over the past month include:

-- Soviet grain crops have benefitted from good weather conditions during the last month. Because of this and the low level of early season grain purchases, the import forecast for wheat was reduced by 2 million tons to 18 million tons and the coarse grain import projection has been cut by 3 million tons to 11 million tons.

-- Prospects for U.S. corn exports in 1983/84 (July-June) diminished over the past month, in line with revised import demand by a few key countries. The slow pace of export shipments also led to a downward adjustment in estimated U.S. coarse grain exports in 1982/83.

-- Onset of the monsoon in India has helped to reduce apprehension about this year's rice crop. This, combined with higher government procurements from this year's bumper wheat crop, may reduce India's wheat import requirement in 1983/84. India has also entered the world rice market for its first significant purchases since 1976. Indian rice imports are now forecast at 300,000 tons, owing to very low government stock levels.

-- Deteriorating wheat crop prospects are expected to boost Brazilian wheat import demand this season, despite government efforts to narrow the large subsidies applied to millers and consumers. Recent unfavorable weather is also likely to result in a decrease in exportable corn supplies this year and, possibly, corn imports.

-- The Philippine corn crop deteriorated further during the past month and imports of around 750,000 tons are now expected to be needed to satisfy demand. This is an increase of 400,000 tons over last month's estimate.

-- Decreased corn and barley crop prospects in Spain, combined with an earlier understatement of import requirements, have led to a substantial increase in expected import demand in 1983/84.

-- Continued drought across northern Africa has caused a further increase in coarse grain import requirements for Algeria and Morocco in 1983/84. Moroccan coarse grain imports are now expected to reach 660,000 tons, up from the 160,000-ton estimate of last month. Algerian imports are expected to increase by 100,000 tons from the previous forecast, to 1.05 million tons in 1983/84.

-- Reports of an improved Iranian wheat crop this year, due to increased acreage and improved weather conditions, have led to a 500,000-ton decrease in import demand.

-- Brazil's rice crop is now expected to be around 8 million tons, down 1.2 million tons from 1982. As a result, Brazil is forecast to import around 400,000 tons of rice this year.

WHEAT

Major Importers

Developments over the past month have tended to weaken forecast 1983/84 world wheat demand, although total trade is still expected to exceed the previous year's level. Soviet imports during the 1983/84 year are expected to drop significantly because of prospects for a better quality crop. In India, increased production and more favorable support prices--which have aided government procurement--will reduce wheat import requirements in 1983/84. Algerian imports for 1983/84 were revised downward in line with a sharply lower outcome in imports in 1982/83. While Algerian purchases from the European Community (EC) and other suppliers were up substantially from 1981/82, imports from the United States and Canada were lower than expected. Brazil also imported less wheat in 1982/83 than earlier forecast, but unfavorable prospects for the current crop indicate increased import requirements this year. A downward revision in wheat imports by Iran in recent years was based on available export shipping data and, this year, on reports of an especially favorable wheat crop.

Major Exporters Outside the United States

Canadian, Australian and Argentine 1983/84 wheat export forecasts remain unchanged this month at 40.5 million tons, 4 million above the 1982/83 season levels. This increase is primarily due to Australia's recovery from the prolonged drought that severely reduced last season's output. A record area sown to wheat and favorable conditions are expected to result in the second largest wheat outturn in Australian history; wheat exports are likely to resume more normal levels when harvesting gets underway in October.

Canada's wheat production and exports are forecast to reach record levels for the fourth consecutive year. Canadian sown area is larger than anticipated--despite government recommendations for a 5-percent decrease in area, farmers responded by increasing wheat area by 9 percent over 1982 levels. Yield prospects improved over the month and if current favorable conditions continue, the Canadian wheat crop has considerable upward potential. The Canadians are finishing a very successful marketing year and new crop sales will begin to move in August. The Argentine situation remains essentially unchanged with roughly one million tons of wheat left uncommitted to sell through December 1983. Favorable soil moisture conditions have continued for fall sowings.

The European Community

EC wheat production prospects, particularly in France, have fallen slightly since last month. However, export availabilities still remain large and export authorizations are 45 percent higher than for a comparable period last year. Meanwhile, to facilitate the removal of surplus wheat from the domestic market, the EC is finalizing its plans for subsidized feed incorporation and obligatory intervention buying during the first three months of the 1983/84 season.

U.S. Trade Prospects

U.S. Census data through May and export inspections through June point to U.S. wheat exports in 1982/83 (July-June) at about 40.0 million tons. The 1983/84 estimate for U.S. exports remains unchanged from last month at 38.1 million tons, a level significantly below that of 1982/83. Both the Soviet Union and China have yet to purchase wheat from the United States for delivery this year and improved crop prospects in other major U.S. markets, such as India and China, indicate reduced U.S. exports. Also, the United States can continue to expect strong price and credit competition from the other major exporting countries in many importing countries.

COARSE GRAINS

Major Importers

Developments during the past month have resulted in a slight decrease in estimated coarse grain trade in the July-June year that just ended and also a reduction in forecast import demand in 1983/84. Expectations for a larger Soviet coarse grain crop led to a sharp reduction in imports in the 1983/84 year, while a slowdown in imports led to a decline in estimated imports for 1982/83. Increased import demand in Egypt, Algeria and Morocco has helped to offset the decrease in Soviet imports. Imports are expected to increase in these north African countries because of a combination of drought-reduced crops and strong demand by the intensive feeding sectors. The corn crop in the Philippines has also been set back by dry weather and imports are expected to increase sharply in 1983/84.

Major Exporters Outside the United States

Competitor coarse grain exports in 1983/84 (July-June) are still expected to exceed 1982/83 levels by about a half million tons, despite the south African crop shortfall. The coarse grain shortage in south Africa is worse than previously thought. Farm deliveries from the severely reduced corn crop are now expected to fall one million below previous estimates, raising import requirements. Two years of drought are also expected to impact negatively on next season's output and reduce export availabilities which would begin to move in May 1984. The 1983 Argentine corn crop, with 95 percent of the harvest complete, is larger than previously anticipated due to better yields and a larger area.

U.S. Trade Prospects

The U.S. coarse grain export forecast for 1982/83 (July-June) is slightly lower than a month ago, based on export inspections through June. The outlook for U.S. corn exports in 1983/84 (July-June) has also declined from last month's estimate, primarily because of the decrease in expected import demand by the Soviet Union. However, the U.S. export forecast still remains well above the 1982/83 level.

RICE - 1982/83

World rice production in 1982/83 remains unchanged at 418 million tons. Reduced estimates of this year's crop in Brazil and Uruguay were more than offset by upward revisions in the estimated outturn of last year's crop in Burma and Indochina. World rice trade is currently forecast at 12.6 million tons--nearly 150,000 tons below last month's estimate but nearly 1.1 million tons above the low 1982 volume. Increased export forecasts for Pakistan, Vietnam and Taiwan were more than offset by reduced estimates for the United States, China, Australia and Uruguay. Import estimates were increased for India and China, but trimmed for Nigeria, Malaysia, Italy and Sri Lanka.

Major Importers

In its first significant rice purchases since 1976, India has bought 120,000 tons of Thai and Burmese rice. Rice imports in excess of 300,000 tons are projected to augment government-held stocks prior to the new harvest in the late fall. The rice outturn in central Brazil is expected to be even lower than previously thought. This year's Brazilian crop is now estimated to be 8.0 million tons or 1.2 million tons smaller than last year's. Brazil is expected to soon conclude significant purchases of rice for September-January shipment.

Indonesia purchased additional quantities of rice from Burma and possibly the Republic of Korea in the last month, bringing its total import commitments to over 1.25 million tons. Total Indonesian import commitments remain forecast at 2.0 million tons. With the conclusion of government-to-government purchases last month with Thailand and Vietnam, the Ivory Coast is believed to have fully covered its import needs of 375,000 tons. Because of recovery in this year's main Maha rice crop, Sri Lanka is unlikely to import the 160,000 tons which had been purchased on its account. Accordingly, the 1983 import estimate has been lowered to 120,000 tons.

Major Exporters Outside the United States

Pakistan's rice exports in 1983 may reach 1.25 million tons assuming that shipments for new crop coarse rice and/or additional basmati sales occur during the last two to three months of the year. With its coarse rice qualities essentially sold out, Pakistan's export commitments are estimated at 1.18 million tons. Pakistan is reported to be negotiating with Brazil for the sale of up to 200,000 tons of new crop rice. Thailand's new sales activity remains dull. Estimated export commitments are placed at 2.85 million tons against a projected export level of 3.5 million tons. With new sales to Indonesia and India, Burma's export commitments are estimated to be in excess of 950,000 tons. Unless shipments in the second half of the year pick up dramatically, it is unlikely that Burma's exports in 1983 will exceed 800,000 tons. Because of growing concern regarding moisture deficiencies for the new crop and the extensive sales activity to date, Burma is reported to now be a reluctant seller.

In view of the apparent absence of Indonesia from the Chinese market and current crop production difficulties, the export forecast for China has been reduced by 100,000 tons this month. Taiwan's estimated export commitments are believed to be in excess of 600,000 tons. With a new round of sales activity expected in the next 30-45 days, the export forecast for Taiwan has been

increased to a record 900,000 tons. After a 20-year absence, Vietnam is expected to emerge again as a net rice exporter in 1983. While importing 75,000 tons of low-quality rice, Vietnam is projected to export 160,000 tons in 1983. Due to rain at harvest, Uruguay's production and export estimates have been reduced. A lower estimate of carry-over stocks underlies the reduced export estimate for Australia.

U.S. Trade Prospects

On the strength of P.L.-480 business, U.S. rice shipments picked up in June and new commercial sales were limited. Exports during the 1982/83 (August-July) marketing year are expected to fall slightly short of 2.2 million tons. The continued widening price spread with competing origins underlies the reduction in the calendar 1983 export forecast.

RICE - 1983/84

World rice production is preliminarily forecast at 421 million tons. Unfavorable weather in China is expected to have reduced yields on the early season rice crop and will likely further delay the subsequent late season crop, making it even more vulnerable to cold weather.

In Northeast Asia, cool temperatures were recorded in the Republic of Korea and Japan. In mid-June rains picked up in the Republic of Korea, allowing the planting to be finished about one week ahead of normal. Good rains are needed for the rest of July as overall moisture conditions for June and early July were below normal. In China, heavy rains continued over the Yangtze River Valley, but needed drier weather was experienced along the southern coastal region. In Southeast Asia, Thailand's major producing areas received good rains. Indochina's rice areas experienced a drier than normal June. Malaysia's east coast experienced good rains last month while the rice areas on the western coast were dry. Rains have intensified in the Philippines during the second week of July, only partially compensating for below normal rains in May and June. The northward advance of the southwest monsoon across the subcontinent has been rapid, reaching Pakistan by early July. The monsoon, however, has been weak. Rainfall in July and August will be critical (especially in the south) if India is to harvest an average or above average crop. Rainfall in Bangladesh in June was below normal and may interfere with development of the main Aman rice crop. After a prolonged dry spell, rains have picked up in Sri Lanka which may improve prospects for the Yala crop.

World supply and demand may be significantly tighter than previously thought. World rice trade is projected to decline to 11.9 million tons and carry out stocks may decline by a further 1.5 million tons to 14.5 million tons--the lowest level since 1974/75.

Major Importers

East Asian imports of rice are currently forecast to total 570,000 tons--the lowest level in five years. A minimal level of imports may occur in the

Republic of Korea in order to allow carryover stocks to remain at or above the one-million-ton level. Southeast Asian rice imports are expected to decline by 500,000 tons to 2.0 million tons in 1984, largely as a result of a projected decline in Indonesia. Assuming no further rice imports by India next year, South Asian rice imports are projected to decline to 240,000 tons, down 360,000 tons from the level forecast for this year. Middle East rice imports in 1984 are again expected to reach about 2.0 million tons. Despite projected increases in Nigerian rice imports, African rice imports in 1984 are currently forecast to level off at slightly more than 3.0 million tons. European rice imports (excluding the USSR) are preliminarily assumed to increase next year by 125,000 tons to nearly 1.7 million tons. Continued heavy imports by Brazil and Peru are forecast into the coming year. As a result, imports of rice in Latin America are projected to approximate the 1.0-million-ton level currently expected in 1983.

Major Exporters Outside the United States

Due to reduced carry in stocks, the combined exports of Thailand, Pakistan and Burma are currently projected to be off 250,000 tons in 1984. A sharp drawdown in surplus stocks in 1983 is likely to result in greatly reduced exports by Japan and Taiwan. On the other hand, assuming more normal crop outturn next year, a recovery in rice exports by Argentina, Uruguay and Australia is expected.

U.S. Trade Prospects

The relatively limited supply availability in the United States may result in the continuation of unusually high price premiums over rice from competing origins. U.S. rice exports in 1983/84 (August-July) and calendar 1984 are forecast to remain depressed at 2.2 million tons.

NOTE: "STOCKS AS PERCENT OF UTILIZATION" REPRESENT THE RATIO OF MARKETING YEAR ENDING STOCKS TO TOTAL UTILIZATION.

- 1/ TRADE DATA AS EXPRESSED IN THIS TABLE EXCLUDE INTRA-EC TRADE.
- 2/ FOR COUNTRIES FOR WHICH STOCKS DATA ARE NOT AVAILABLE (EXCLUDING THE USSR) UTILIZATION ESTIMATES REPRESENT "APPARENT" UTILIZATION, I.E. INCLUDE ANNUAL STOCK LEVEL ADJUSTMENTS.
- 3/ STOCKS DATA ARE BASED ON AN AGGREGATE OF DIFFERING LOCAL MARKETING YEARS AND SHOULD NOT BE CONSTRUED AS REPRESENTING WORLD STOCK LEVELS AT A FIXED POINT IN TIME. STOCKS DATA ARE NOT AVAILABLE FOR ALL COUNTRIES AND EXCLUDE THOSE SUCH AS THE PEOPLE'S REPUBLIC OF CHINA AND PARTS OF EASTERN EUROPE. WORLD STOCK LEVELS HAVE BEEN ADJUSTED FOR ESTIMATED YEAR-TO-YEAR CHANGES IN USSR GRAIN STOCKS, BUT DO NOT PURPORT TO INCLUDE THE ABSOLUTE LEVEL OF USSR GRAIN STOCKS.
- 4/ PRELIMINARY.
- 5/ PROJECTION.

^{2/} Prior to September 1971 prices for No. 2 Manitoba Northern.

FOOTNOTES TO WORLD GRAIN SUMMARY AND TRADE TABLES

- 1) Includes wheat flour and products.
- 2) Argentina, Australia, Canada, South Africa and Thailand.
- 3) Adjusted for transshipment through Canadian ports: Excludes products other than flour.
- 4) Wheat, rye, corn, barley, oats, sorghum, millet and mixed grains.
- 5) Production data includes all harvest occurring within the July-June year indicated, except that small grain crops from the early harvesting Northern Hemisphere areas are "moved forward;" i.e., the May 1977 harvests in areas such as India, North Africa and southern United States are actually included in "1977/78" accounting period which begins July 1, 1977.
- 6) "Bunker weight" basis; not discounted for excess moisture and foreign material.
- 7) Utilization data are based on an aggregate of differing local marketing years. For countries for which stocks data are not available (excluding the USSR) utilization estimates represent "apparent" utilization; i.e., they are inclusive of annual stock level adjustments.
- 8) Stocks data are based on aggregate of differing local marketing years and should not be construed as representing world stock level at a fixed point in time. Stocks data are not available for all countries and exclude those such as the People's Republic of China, and parts of Eastern Europe: The world stock levels have been adjusted for estimated year-to-year changes in the USSR grain stocks, but do not purport to include the entire absolute level of USSR stocks.
- 9) Inclusive of Soviet stock changes; see footnote 8.

This circular was prepared by the Grain and Feed Division, Commodity Programs, FAS/USDA, Washington, D.C. 20250. Further information may be obtained by writing the Division or telephoning (202) 447-2009.

Note: The previous report in this series was World Grain Situation/Outlook: Foreign Agriculture Circular FG-16-83, June 15, 1983. MONTHLY EXPORT RATES FOR U.S. GRAIN AND FEED COMMODITIES

ANNUAL MONTHLY AVERAGES FOR FY 1979 - 1983 (proj)
AND MONTHLY FROM NOVEMBER 1981 - MAY 1983

****HIGHLIGHTS****

Since a month ago, prospects for U.S. grain and feed commodity exports have brightened, mainly as a result of the recently renegotiated U.S./USSR grain agreement. The Soviets have been virtually absent from the U.S. market since January, but significant buying activity could soon resume. In other areas, however, prospects for U.S. grain exports have deteriorated. Competition among wheat exporters has stepped up in several major markets in North Africa, the Middle East and Asia at the same time that the volume of wheat traded in the world market appears to have contracted further. The pace of world coarse grain trade also slowed over the past month, with U.S. corn shipments at the lowest level this marketing year. Developments that have led to this outlook for U.S. grain exports are highlighted below:

- The United States has negotiated an agreement in principal with the USSR, calling for minimum sales of 9 million tons annually over the next five years. This will replace the current bilateral agreement that expires September 30 and calls for minimum sales of 6 million tons per year.
- The pace of U.S. export shipments and sales of wheat and coarse grains in recent weeks was exceptionally slow, with several major importing countries absent from the market (USSR, China and India), cutting back on purchases (Mexico and the Republic of Korea) or turning to other suppliers (Egypt, Morocco, North Yemen, Syria and Indonesia). Shipments and sales of U.S. rice were also slack.
- Export forecasts for U.S. coarse grains during both 1982/83 and 1983/84 were lowered over the past month, in line with reduced estimates for Soviet imports. However, recent stress experienced by the U.S. corn crop could lead to somewhat reduced prospects for total U.S. corn supplies in 1983/84, offsetting the decrease in the 1983/84 U.S. corn export forecast. Higher U.S. corn prices related to the crop stress have also resulted in the release of roughly 1.1 billion bushels of corn from the U.S. farmer-owned reserve program, making this corn available for marketing.
- New market opportunities for U.S. grain exports have appeared over the past month in a number of countries. Recent unfavorable weather could lead to larger-than-expected wheat imports by Brazil and, possibly, to Brazil's first corn imports in three years. Algerian purchases of U.S. durum are about 100,000 tons ahead of this time a year ago and strong buying activity should continue. Improved sales opportunities have also developed for U.S. corn in South Africa and Southeast Asia, while both Iraq and North Yemen have reentered the U.S. rice market.
- Australia has announced a 1.5-million-ton wheat sale to China for late 1983 and 1984 shipment. China must still buy an additional 3.4 million tons of grain from the United States for delivery by the end of December under the U.S./Chinese bilateral agreement.
- Morocco has made its first large wheat purchase from France in seven months. France has also been increasing wheat sales to Egypt and Indonesia. North Yemen and Syria have made their first wheat purchases ever from Canada, while Indonesia made its first purchase from Argentina.

WHEAT

LATEST U.S. EXPORT FORECAST, SHIPMENTS AND SALES

Export Forecast. As of July 13, the official forecast for 1983/84 (June-May) wheat exports--excluding 2 million tons of products--remains at 36.1 million tons. Both the Soviet Union and China have yet to purchase wheat from the United States this year. Strong competition in other major markets, such as Brazil and Mexico, has also contributed to an export forecast below that of 1982/83.

Shipments and Sales. Shipments and sales performance of U.S. wheat for export was poor during the four-week period ending July 21. All U.S. sales to India have now been shipped, leaving Japan, Brazil and Chile as the likely main destinations for U.S. wheat exports over the near-term.

IMPORTER BUYING ACTIVITY

Purchasing activity in the world market appears to have slowed further during the last month. Bangladesh and Sri Lanka left the market while Brazil, Egypt, Iraq and the Republic of Korea made purchases at levels below those of last month. China made another large purchase, this time under its long-term agreement with Australia. Algeria and Tunisia returned to the market for durum, while Syria returned to the market for hard and soft wheat.

MARKET OPPORTUNITIES

****Algeria:** For the last two seasons (1982/83 and 1983/84), the Algerian wheat crop has been sharply reduced by drought. Stocks have been worked down to minimum levels and wheat imports in 1983/84 could exceed the previous record set in 1981/82. A larger share of this import demand could be supplied by the United States this year than last, with prospects for U.S. durum exports particularly bright. Last season, Algeria imported around 300,000 tons of wheat (mainly durum) from Greece, but Greek wheat has also been stressed by drought this year and total exportable supplies will be significantly smaller. Algeria could also increase durum imports from Canada and Argentina, with which they have bilateral agreements currently in place. Wheat imports (mainly semolina) from Italy are expected to remain at around 800,000 tons.

Apparently, some U.S. exporters have been discouraged from trying to break into the Algerian market by unfamiliarity with the Algerian tendering system. A translated copy of the standard wheat tender issued by the National Office of Cereals may be obtained by contacting:

Export Promotion Division
FAS/USDA
Washington, D.C. 20250
Telephone: (202) 447-6343

Documents are available in French, as well as English. The sample document represents standard technical and commercial requirements and changes vary little from one issuance to the next, except for quantity and delivery periods. For further information, the U.S. agricultural trade officer, who covers Algeria from Tunis, may be contacted at:

Greece	60	190	300
Italy	520	860	800
France	170	430	300
Other	270	30	100
TOTAL	2,200	2,700	2,500

1/ Preliminary estimates.

****Brazil:** Continued area and yield losses that have been caused by excessive rains will likely lead to a further downward revision in estimated wheat production this year. This year's reduced crop could also result in imports in excess of the current 1983/84 (July-June) estimate of 4.0 million tons. In 1982/83, the United States supplied around two-thirds of Brazil's wheat imports.

****Republic of Korea:** Reportedly, the government is considering new plans that would allow flour millers to meet consumer demand by producing any type of flour required. Over a period of time, this action should have a positive impact on purchases of U.S. wheat as new flour-based products are developed and marketed. In addition, a plan to import flour beginning in 1985 or 1986 is being considered, which could in turn prompt the domestic milling industry to eliminate some older mills and increase efficiency.

OTHER DEVELOPMENTS AFFECTING U.S. EXPORTS

Other Exporting Countries Selling Activity and Competitive Practices

****European Community:** Through July, using subsidies of about \$60 per ton, the EC has authorized 2.0 million tons of soft wheat for export under its weekly export tender system, the primary vehicle for monitoring and controlling EC exports. That pace is one-third higher than this time a year ago. During 1982/83, the EC used its weekly tenders to authorize a record 8.1 million tons, a record that might have been higher had the EC not voluntarily restrained its exports due to severe budgetary constraints. With large carry-over stocks from last year's record wheat crop and a near-record harvest expected this year, pressure will likely be strong to exceed last year's record export volumes.

In a related development, financial concerns have prompted the EC Commission to consider limiting intervention for bread wheat to 3 million tons during the first three months of the new August-July year. Under the procedure of recent years, unlimited intervention for those three months has been an important step in supporting the domestic market, and might have meant 5-6 million tons of wheat offered for subsidized intervention storage this year. This limitation might, therefore, be considered counter-productive if it prompts early-season panic selling, particularly if the ceiling is reached within a few weeks and the Commission faces few other ways of supporting the market. Exports would continue to be an option that might be viewed with increasing favor within the context of the overall EC budget crunch. Lower EC prices would reduce the gap between EC and world market prices and thereby lower EC export subsidy costs vis-a-vis costs of other market support plans.

****Australia:** The Australian Wheat Board (AWB) recently announced a 1.5-million-ton wheat sale to China, reportedly for shipment in late 1983 and 1984. The Australian-Chinese grain agreement calls for 1.5-2.0 million tons of wheat to be shipped to China annually, on a calendar year basis. Severely reduced Australian wheat supplies have cut deeply into overall export movement, with shipments to China in January through June 1983 totaling only 230,000 tons. The Chinese grain agreement is the only agreement Australia has not yet fully met. The recent sale is expected to consist primarily of new crop wheat harvested in October. Additional Australian sales to China for calendar year 1984 are likely, as a near-record Australian wheat crop is anticipated.

The AWB has also announced an additional 100,000-ton wheat sale to Iraq, bringing total 1983 sales to 500,000 tons, fulfilling the minimum commitment against their long-term grain agreement, which is also on a calendar year basis. Only 400,000 tons of Australian sales were expected, given the severely drought-reduced Australian crop and a consensus reached earlier this season between the AWB and Iraq to ship at this lower level.

****Australia:** Preliminary data indicate that Australia was able to maintain wheat export levels to China, Egypt, Japan, Malaysia, Iran and Kuwait during the July 1982-June 1983 period, while scaling back exports to the USSR, India, Indonesia, Iraq and North Yemen. Three months of heavier old crop movement (July-September) are included in the July-June shipments, which helped to even out export flows. Australia has just recently switched to an October-September marketing year, with the bulk of 1982/83 marketing year exports expected to move in the October-March period.

AUSTRALIAN WHEAT EXPORTS BY DESTINATION

1/ Preliminary estimate.

2/ Less than 50,000 tons.

****Argentina:** Preliminary data for July 1982-June 1983 show that the bulk of the large increase in Argentine wheat exports went to the USSR, China and Iran. Reported sales to date on the Argentine 1982/83 (December-November) marketing year are even more dramatic. Argentine wheat sales to the Soviets may exceed 4.2 million tons, sales to China are expected to reach over 3 million tons and sales to Iran may exceed 800,000 tons. Argentine wheat exports are forecast to reach 10.3 million tons on their December-November marketing year, with apparently somewhat less than one million tons of this amount still unsold.

Competitive Developments in Selected Foreign Markets

****Indonesia:** Competition continues to be strong for Indonesia's 1.5-million-ton wheat market which has traditionally been supplied by the United States and Australia. The EC is considering placing Indonesia under its General Schedule, or flat-rate subsidy system, that allows the EC to monitor and control the flow of grain to specific destinations. France has already shipped 100,000 tons of wheat to Indonesia this year and Canada has shipped 245,000 tons. Also, Argentina has broken into the market with a recent sale of around 50,000 tons, apparently at around \$15 per ton below U.S. prices at the time. This is Argentina's first sale ever to Indonesia.

****North Yemen:** Apparently, North Yemen has purchased 20,000 tons of wheat from Canada for delivery during July. This would be Yemen's first purchase ever from Canada. In recent years, Yemen--which imports around 350,000 tons of wheat annually--has purchased wheat from the United States and Australia. Yemen has a 250,000-ton per year wheat agreement with Australia, but the need for credit and recent difficulties with this agreement led Yemen to purchase U.S. wheat this year. In addition to its imports of wheat as grain, Yemen also imports about 100,000 tons of flour each year, traditionally of EC origin.

Internal Price Policies of Foreign Countries

****Egypt:** In an attempt to secure a larger amount of the country's wheat production, the Egyptian government has announced increases in support prices for the 1983 wheat crop, much of which has already been harvested. New prices range from \$82-\$63 per ton, depending on the class of wheat purchased. In addition to changing prices, the decree also obligates producers to deliver specific amounts of their crops based on average local yields. Previously, sales to the government had been voluntary and amounted to an insignificant portion of production, since farmers consumed much of their own wheat and sold the surplus on the open market. Finally, transportation of wheat between districts was also prohibited from May 1-August 31 (the harvest period), without special permission. Since Egypt imports around 6 million tons of wheat and wheat flour and produces only about 2 million tons, this will probably not have much affect on imports.

****Republic of Korea:** Effective July 1, 1983, the Ministry of Agriculture and Fisheries delegated authority to issue wheat import recommendations to the Korea Mills Industrial Association (KOFMIA). Also under consideration are plans to allow some large flour mills to import wheat directly without going through KOFMIA. If adopted, individual mills would determine the purchasing method; i.e., competitive bidding or negotiated contract, as well as source. It is likely, however, that firms will continue buying through KOFMIA because of cost savings from bulk wheat purchases and delivery.

****Japan:** The Rice Price Deliberation Council, an advisory board for the Ministry of Agriculture, Forestries and Fisheries, recently recommended that producer prices for 1983 crop wheat and barley be held at last year's levels of \$770 and \$697 per ton, respectively. Prices have not changed since a 3.2-percent increase in 1981. This recommendation was motivated by efforts to reduce government spending and fears that support prices that are already five times world prices would promote overproduction. A government decision is expected soon.

****Major Exporters:** The latest internal support prices for the principal world wheat exporters basis individual marketing years are listed below. Prices are not strictly comparable because of quality differences and because U.S., Argentine and EC prices are on a local delivery point basis, while Canadian and Australian prices are basis export position. For example, the Canadian price in 1982/83 is for No. 1 CWRS, which only represented 25 percent of the 1982 crop; Canadian No. 2 CWRS was discounted by approximately C\$6 per ton and No. 3 CWRS by about C\$11 per ton. EC prices given below do not include monthly storage payments that all producers receive.

U.S. EXPORT EXPANSION ACTIVITY

****India:** U.S. Wheat Associates, anticipating the need for Indian imports of wheat and recognizing the stiff competition in world wheat markets, invited a high level Indian government team to the United States. While in the United States, the team visited with USDA officials, toured production areas and observed marketing facilities. Team members met with U.S. Wheat officials in Oregon, Washington, Nebraska, Kansas and Texas.

CORN AND SORGHUM

LATEST U.S. EXPORT FORECAST, SHIPMENTS AND SALES

Export Forecast. As of July 13, the official 1982/83 (October-September) U.S. corn export forecast (excluding 400,000 tons of products) was lowered to 47.9 million tons, down around 1.3 million tons from a month ago. The U.S. corn export forecast for the 1983/84 marketing year was also lowered to 51.7 million tons (excluding products), along with a decrease in forecast Soviet corn imports. However, prospects for generally increased buying activity of U.S. corn this year from South Africa, major markets in Asia and most North African countries continue to support the forecast increase in 1983/84 U.S. corn exports over the 1982/83 level.

U.S. sorghum exports in 1983/84 (October-September) are projected at 6.35 million tons (250 million bushels), 1.5 million tons higher than the 1982/83 estimate of 4.8 million tons (190 million bushels). The 1982/83 forecast was reduced 4 percent from a month ago as a result of the slack pace of shipments and sales.

Shipments and Sales. U.S. shipments and sales of corn were down again this month while sorghum remained steady. Korean corn purchases fell off this month, as did purchases by Mexico. Possible sales to the USSR under the new long-term grain agreement could lead to an increase in activity in the near-term.

IMPORTER BUYING ACTIVITY

Importer buying activity has slowed again this month, continuing the slide from a purchasing surge during April and May. Slower purchasing by Mexico and the Republic of Korea contributed to the slowdown. However, the Soviet Union could soon resume large-scale purchasing.

RECENT CORN AND SORGHUM IMPORTER BUYING ACTIVITY
REPORTED BETWEEN JUNE 23 AND JULY 27, 1983

MARKET OPPORTUNITIES

****Brazil:** Harvested area and yield losses caused by continued rains and flooding in key corn producing areas have led to revised estimates for this year's corn crop and a suspension of additional corn sales for export. Furthermore, if damage to the crop turns out to be larger than currently estimated, supplies may not be sufficient to cover domestic demand for corn, particularly if Brazil meets this year's 500,000-ton corn export commitment under its bilateral agreement with the USSR. Imports of as much as 500,000 tons could be required. The last year Brazil imported sizeable quantities of corn was in 1980/81, when it made all of its purchases of nearly 2 million tons from the United States. If Brazil imports corn this year, a significant portion is again likely to be of U.S. origin.

****South Africa:** Reports indicate that the South African corn crop may be smaller than earlier thought, suggesting coarse grain imports may be larger than previously expected. South Africa recently tendered for an additional 500,000 tons of corn, bringing total corn tenders to 1.2 million tons. At this time, it appears that plans for barley imports have been shelved, improving opportunities for additional U.S. corn sales to South Africa. Reported U.S. corn sales to South Africa currently total 340,000 tons, with 48,000 tons already shipped.

U.S. CORN SHIPMENTS, SALES AND UNIT VALUE
ANNUAL MONTHLY AVERAGES FOR FY 1979 - 1983 (proj)
AND MONTHLY FROM NOVEMBER 1981 - MAY 1983

****Southeast Asia:** U.S. sales of corn into the Southeast Asian area could increase in 1983/84, as a result of drought-reduced local supplies and somewhat reduced export availabilities in Thailand. Thai corn exports are expected to recover somewhat from the low level of 1982/83, but still remain at least 500,000 tons below the record 1981/82 level of 3.3 million tons. This leaves some room in Thailand's regional Southeast Asian market for U.S. corn, especially since other countries in the area, such as the Philippines, also have short crops because of drought.

OTHER DEVELOPMENTS AFFECTING U.S. EXPORTS

Competitive Developments in Selected Foreign Markets

****Greece:** In a move toward self-sufficiency, the Agricultural Bank of Greece has reportedly been instructed to offer loans for working capital, machinery and equipment to farmers and cooperatives as an inducement to further stimulate corn production. The size of the Greek corn crop has already doubled since 1979, largely as a result of significant yield gains. Higher yields have followed increased use of single-hybrid corn varieties and extensive irrigation. Expanded domestic production coupled with increasing imports of French corn have placed pressure on U.S. corn sales in the Greek market. Prior to entry into the EC in 1981, Greece imported virtually all U.S. corn. Now, due to the shrinking Greek import market and competition from lower-priced French grains, purchases of U.S. corn have dropped by half.

GREEK CORN PRODUCTION, IMPORTS AND UTILIZATION
(AUGUST/JULY--1,000 HECTARES AND 1,000 TONS)

	Area	Production	Total Imports	Imports From U.S.	Utilization
1979/80	122	731	1,240	1,240	1,840
1980/81	163	1,233	985	985	2,000
1981/82	161	1,337	672	640	2,100
1982/83	163	1,449	585	454	2,150
1983/84	166	1,575	550	N/A	2,230

****Egypt:** Egypt has reportedly purchased 180,000 tons of corn from Argentina which would be the first corn purchased from an origin other than the United States in over 10 years. Argentine corn is currently \$10-15 per ton cheaper than the U.S. f.o.b. Gulf price.

****Syria:** Apparently, Syria bought 100,000 tons of Canadian hard wheat over the past month, its first wheat purchase from Canada ever. In recent years, the United States has been making inroads into the Syrian market which previously was supplied largely by the EC. In 1982/83 (July-June), Syria bought 50,000 tons of U.S. wheat--its first wheat purchase from the United States in three years.

Internal Price Policies of Foreign Countries

****Brazil:** Brazil has recently made several policy changes designed to reduce credit subsidies to farmers. In the past, the base for calculating the interest rates on agricultural loans to farmers was pegged to the National Consumer Price Index, but now will be pegged to the monetary correction (the variation in the national treasury indexed bonds) instead. Different

percentages of this variation are then specified, plus 3 percent, to calculate the interest rate farmers will pay on their loans. These percentages have also been changed and now are 70 percent for the north-northeast region of the country and 85 percent for the south-southeast region.

Apparently, some effort may be made to index the increase in credit costs into minimum support prices offered to farmers. However, if this occurs, the government will be creating an indexation that may turn out to be another element of budgetary pressure on the government, since it could well become the sole purchaser of agricultural products.

U.S. EXPORT EXPANSION ACTIVITIES

****EC:** Under a new initiative by the U.S. Feed Grains Council (USFGC), some U.S. corn farmers have the opportunity to contract directly with buyers in the EC to supply them with "industrial grade" corn. This corn is used for manufacturing alcohol products, snack foods and other corn products for human consumption. The new venture is the result of several years of efforts by the USFGC to increase sales of corn for industrial use to the EC. Current estimates are that as much as 10 million bushels of U.S. corn could move into the EC under this program in 1984.

At a time when EC imports of corn for feed have been declining, high-quality industrial corn imports have been a growth area. The USFGC initiative comes at an opportune time. South Africa had been the principal U.S. competitor for the EC industrial corn market. With South Africa unable to supply because of drought, the United States should be able to increase significantly its share of the industrial corn market and expose a broad range of European processors to the idea of contracting directly with U.S. farmers to produce special varieties for industrial uses.

****BARLEY, OATS AND RYE****

LATEST U.S. EXPORT FORECAST, SHIPMENTS AND SALES

U.S. barley export commitments to Taiwan and Japan continue to be substantially higher than this time a year ago, bolstering prospects for larger barley exports this year than last.

U.S. FEED BARLEY PRICES
INTERIOR AND EXPORT POSITIONS

DEVELOPMENTS AFFECTING U.S. EXPORTS

Exporting Countries' Selling Activities and Competitive Practices

****EC:** The recently announced wheat policy limiting intervention for the first three months of the new season to 3 million tons means that unusually large quantities of wheat will initially have to be stored on-farm and in commercial storage facilities where barley is presently stored. As a result, increasing quantities of EC barley are moving into intervention stocks and export channels. For example, more than 100,000 tons of new crop winter barley have already been offered into German intervention, which is more than double the quantity offered last year at this time. EC export authorizations for barley have accelerated in recent weeks and, at over 200,000 tons, are also more than double last year's pace.

Competitive Developments in Selected Foreign Markets

****Spain:** Reports indicate that Spanish imports of coarse grain and corn for the first half of 1983 were off 18 and 30 percent respectively--at 3.2 and 1.9 million tons--while barley imports have jumped dramatically from .2 to 1.3 million tons. The United Kingdom has become Spain's major barley supplier with exports jumping from zero last season to roughly 600,000 tons since January 1983. Canadian barley exports to Spain are also ahead of last season. Canadian and EC export prices for barley have been about \$30 per ton below export prices for U.S. corn, \$20 per ton below U.S. sorghum and \$10 per ton below U.S. barley.

****RICE****

LATEST U.S. EXPORT FORECAST, SHIPMENTS AND SALES 1/

Export Forecast. U.S. rice exports in 1982/83 and 1983/84 (August-July) are forecast as of July 13 at 2.15 and 2.2 million tons (milled rice basis), respectively. The export forecasts were trimmed 50,000 tons and 100,000 tons, respectively, from the previous month's forecast.

Shipments. U.S. rice exports during the four-week period ending July 21 slipped to 164,900 tons, compared to the previous four-week total of 183,000 tons. Shipments to Iraq accounted for 31 percent of all the rice shipped and P.L. 480 accounted for an additional 18 percent. Other major destinations included Saudi Arabia and Nigeria. Cumulative shipments continue to lag behind last year's pace. Total shipments of 2.11 million tons are 22 percent below last year's level at this time.

Sales. New sales registrations for 1982/83 delivery jumped to 189,600 tons during the four-week period ending July 21, up from the low level of 174,600 tons sold during the previous four-week period. New rice sales to the Republic of Korea accounted for 110,000 tons or 58 percent of new registrations. Also of note, 44,500 tons of rice have been registered in the last month for Nigeria. Export sales to date now stand at 2.59 million tons, off 13 percent from the 2.97 million tons sold as of the same date one year ago.

1/ Shipments and sales data are on a product weight basis.

IMPORTER BUYING ACTIVITY

Importer purchasing activity continued slow during the last month. Importer buying activity of note included Nigeria, Indonesia, India and the Ivory Coast.

****Indonesia:** Bulog, the food authority, is reported to have purchased 40,000 tons of Burmese rice on a government-to-government contract and has agreed to buy an additional 60,000 tons which is to be priced in September. In addition, Bulog reportedly purchased up to 100,000 tons of medium-quality Burmese rice from the private trade. It also appears that Indonesia has been loaned 100,000 tons of rice from the Republic of Korea. The above bring Indonesia's import commitments to over 1.35 million tons against total imports forecast at 2.0 million tons. Through June, 426,000 tons of rice were imported. With the help of domestic purchases from the main season rice crop, government-held rice stocks increased to slightly less than 1.5 million tons at the end of June. This compares to 2.57 million tons in government warehouses one year ago.

****Iran:** Additional purchases of Thai rice last month bring Iran's total purchases to an estimated 565,000 tons. Iran is expected to buy an additional 100,000 tons (from Thailand) for fourth quarter delivery.

****Ivory Coast:** With the completion of government-to-government sales with Thailand and Vietnam, the Ivory Coast is believed to have completely covered its import needs of 375,000 tons for 1983. Through July, the Ivory Coast imported over 177,000 tons including 21,000 tons from Vietnam, 146,000 tons from Pakistan and 11,000 tons from Thailand.

****India:** Last month the Food Corporation of India (FCI) purchased 50,000 tons of low-quality Burmese rice. Reportedly, FCI sought to buy larger quantities in both Burma and Thailand and is currently negotiating a government-to-government purchase of 100,000 tons in Thailand. India is forecast to import over 300,000 tons of rice in 1983--its first commercial purchases since 1976--in an effort to augment existing stocks. Significantly larger purchases are rumored, but unless the delivery periods on new purchases are stretched out beyond the onset of the harvest in October, or prospects for the new crop deteriorate substantially, there seems to be only limited credence to such reports.

****Iraq:** The Iraqi Grain Board's (IGB) import commitments are now estimated to total 420,000 tons against projected imports of 475,000 tons in 1983. Thai rice export data through May underlies the revised estimated import commitment total.

MARKET OPPORTUNITIES

****Peru:** ECASA, the rice import monopoly, has published a tender calling for offers of 60,000 tons of long-grain rice for September-October shipment. Offers, which are to include 18-months credit, are requested August 15 for 5, 10, 15 and 20 percent broken.

****Brazil:** Due to lower than expected yields in Mato Grosso and Goias states, the U.S. agricultural officer in Rio de Janeiro has lowered his production estimate of the 1983 crop to 7.8 million tons--200,000 tons below his previous estimate--and increased his estimate of imports needed over the next eight months to 600,000 tons.

****North Yemen:** The Yemen General Grain Corporation has issued a tender for 14,000 tons of parboiled No. 2/4 percent long-grain rice for September-October shipment. Offers are due August 9.

****Iraq:** The IGB has requested offers for 37,500 tons of No. 2/4 percent long-grain rice for October-December shipment. Offers are due August 5.

OTHER DEVELOPMENTS AFFECTING U.S. EXPORTS

World rice supply-demand fundamentals (large Brazilian import needs, the return of India as a significant rice importer, large uncovered Indonesian rice import requirements and Pakistan, Burma and the Philippines largely sold out of rice) continue to indicate significantly stronger world rice prices in the last quarter of 1983. Some of the strength, however, could be dampened if Pakistan begins selling significant quantities of new crop rice prior to harvest and/or if unexpected origins (China, North Korea and Taiwan) become especially large sellers for nearby shipment.

World rice prices, although firming, continue to trade within the narrow ranges experienced over the last several months. The posted price of Thai 100 percent, grade B was raised this week to \$275 per ton f.o.b. Bangkok, with rice actually trading about \$10 per ton below this level. In recent weeks, reflecting heavy covering for Nigeria, Thai parboiled rice prices increased up to \$10 per ton. The price of Thai parboiled, 5 percent is currently about \$256-258 per ton compared to a posted price of \$265.

Due to continuing high price spreads between U.S. and Thai rice prices, a number of European rice millers have received trial shipments of brown rice from Thailand. Reportedly, they are pleased with the quality received and have begun to increase their purchases of Thai rice. In addition, shipments of Thai rice to South Africa, normally a U.S. market, have also increased.

****Thailand:** Thai export activity and new sales continue to be disappointing although Thailand and China are the only sources in Asia for significant quantities of long-grain rice. According to one report, Thai exporters are reported to be reluctant to commit themselves to long-term sales as they expect a significant increase in world rice prices during the next four months. In addition, the Public Warehouse Organization and the Marketing Organization of Farmers are expected to soon increase their purchases of rough rice in an effort to increase farmgate prices. Rice exports through July 23 totaled 1.85 million tons or 11 percent less than was shipped as of the same date in 1982.

WEEKLY THAI RICE EXPORTS
(TONS)

Week Ending	Actual	4-Week Moving Avg.
June 25	66,136	68,863
July 2	79,472	74,398
9	50,729	67,588
16	59,873	64,053
23	64,593	63,667

Export commitments are estimated at nearly 2.9 million tons against projected rice exports of 3.5 million tons. The official export target has been raised to 3.3 million tons, but government officials in charge of rice exports are quoted as saying this level should be exceeded. The Ministry of Commerce is reported to be considering sending rice trade

missions to Iran and other countries in the Middle East, and to South America. In addition, a Malaysian trade team is soon expected to come to Bangkok to purchase 70-100,000 tons of rice on a government-to-government basis.

5/ Believed to include financing.

6/ Includes Nigeria/West Africa.

N/A Not available.

****Burma:** The Myanana Export/Import Corporation (MEIC), apparently concerned about deficient moisture conditions to date for the 1983/84 rice crop, has decided to limit its additional rice sales. MEIC's export commitments to date are estimated at nearly 975,000 tons. Reportedly, MEIC has only an additional 50,000 tons of low-quality rice (25-35 percent broken) which is available for sale. Rice exports through June are estimated to have reached 342,000 tons compared to 330,000 tons exported during the same period one year ago. Burma's exports in the second half of the year will need to pick up significantly if total shipments are to exceed 800,000 tons. MEIC's shipments during July are reported to have been heavy.

****Pakistan:** The Rice Export Corporation of Pakistan (RECP) is virtually sold out of old crop coarse rice. RECP is reported to have only 25,000 tons of unsold sind 15/20 percent (as well as an estimated 300,000 tons of basmati rice). On the other hand, RECP is reported to have oversold its stock of 40/45 percent broken by 6,000 tons. Nonetheless, RECP is reported to be negotiating with Brazil to sell either its remaining stock of medium-quality rice and/or 200,000 tons of new crop rice for October forward shipment. Pakistan's export commitments to date are estimated to total 1.18 million tons against export levels forecast at a record 1.25 million tons.

****Taiwan:** With over 315,000 tons exported during the first six months of the year, Taiwan's rice exports are projected to reach 900,000 tons in 1983. Unsold carry-over stocks are estimated at 620,000 tons and the surplus from this year's production is estimated to total 300,000 tons. Reportedly, the latter includes 60,000 tons of long-grain rice which has already been sold.

On July 13, the U.S. Rice Millers' Association (RMA) filed a section 301 trade complaint against Taiwanese rice exports. The petition (which the U.S. Trade Representative has until August 29 to decide to accept or reject) alleges that exports of 850,000 tons of subsidized Taiwanese rice will depress U.S. rice exports by \$57 per ton and will result in the export loss of 464,000 tons of U.S. rice as world rice prices are driven below the U.S. support price. The total loss in rice export earnings is estimated by the RMA at over \$300 million.

****Uruguay:** Unfavorable growing conditions reduced the outturn of this year's crop by one-fourth. Consequently, Uruguay's rice exports in 1983 are forecast to be reduced to 165,000 tons, down over 50,000 tons from that shipped in 1982. This, combined with the lower Argentine crop, means that South American exports of high-quality rice should be off 100,000 tons this year.

****India:** Despite the relatively disappointing performance of the southwest monsoon to date (through July 20 cumulative rainfall was normal or above normal for 67 percent of the total Kharif area, but most of the zones receiving normal precipitation were only "marginally normal"), the U.S. agricultural counselor in New Delhi has raised his forecast for the 1983/84 rice crop by 750,000 tons to 80.3 million tons. The agricultural counselor cites a recent 7.5-percent decrease in fertilizer prices and an 8-percent increase in rice procurement prices (raised to Rs1320 or \$132 per ton for coarse rice and Rs1360 or \$136 per ton for fine varieties). The procurement price increases are expected to have a particularly strong impact this year because of its announcement before planting rather than the normal practice of announcing the new prices at harvest time.

The increased level of production is expected to permit a partial rebuilding in rice stocks to 4.5 million tons by the end of October 1984 (including both private and government-held rice stocks). As of the end of June, government-held rice stocks are estimated to have further declined to less than 4.1 million tons, more than one million tons below that held as of the same date one year ago. With domestic procurement leveling off at about 6.75 million tons (compared to 7.12 million purchased one year ago) and monthly offtake averaging about 600,000 tons over the last few months, government-held rice stocks are currently forecast to decline to 2.0 million tons or below by the end of October 1983.

****Bangladesh:** The government of Bangladesh has set its 1983/84 rice production target at 22.1 million tons--a 4-5-percent increase over that achieved this year. To encourage production, support prices beginning in November will be raised 7 percent to \$151 per ton for rough rice and \$236 per ton for milled rice.

****Sri Lanka:** Due to continuing drought conditions, the dry season (Yala) rice crop is nearly 400,000 tons below last year's outturn. Nonetheless, because government-held rice stocks are currently ample, the Sri Lankan government is reported to be attempting to resell significant quantities of previously purchased but as of yet unshipped Burmese rice.

****Madagascar:** The government of Madagascar has agreed to a significant liberalization of its domestic rice trade and will permit a large increase in retail rice prices. The new government measures should provide a healthy stimulus to rice growers.

While the fixed price for commercially imported rice has been set at FMG140 per kilogram (34¢), the price of domestically produced "ordinary" rice will be allowed to rise as high as FMG299.9 per kilogram (72¢), more than double the present price and more than 400 percent above the official price earlier last year.

The new regulations open up much of the domestic rice trade (the main surplus production areas, however, are exempted) to provincially licensed traders. Delays in promulgating the new regulations will likely preclude fully implementing the liberalization in the rural rice trade until the 1984 rice crop is harvested next summer.

****Japan:** Support prices for the 1983 rice crop will be increased by 1.75 percent. Producers will receive an average price of Y304,433 per ton of brown rice (\$1,275 per ton). This, combined with the elimination of the current Y10.1 billion subsidy to wholesalers for "free channel" rice, likely points to a 2-3-percent increase in consumer rice prices later in the year.

****Philippines:** Following an additional devaluation of the peso, the Philippine government increased fertilizer prices by nearly 7 percent, effective July 12. In addition, effective October 1, 1983, the support price for rough rice will be increased by almost 6 percent to P1800 per ton (\$200). The retail price ceiling is expected to be maintained at P3100 per ton (\$344) until the end of the year.

U.S. EXPORT EXPANSION ACTIVITIES

****GSM-102:** No new GSM-102 programs were announced in the last month. As of July 22, the Commodity Credit Corporation (CCC) had available credit lines totaling \$23.8 million for new rice purchases. The outstanding credit lines were: Iraq \$8.2 million; Jamaica \$0.3 million; Portugal \$10.0 million; Trinidad \$2.0 million; and North Yemen \$3.3 million.

****Blended Credit:** In the past month, no new blended-credit programs were announced. As of July 22, the CCC had available credit lines for \$42.7 million of blended credit for rice purchases. The outstanding credit lines included: \$41.0 million for Iraq; \$0.4 million for North Yemen; and \$1.3 million for Jamaica.

****P.L. 480:** In the past month, new agreements/amendments were signed with Madagascar, Tanzania, Bolivia and Senegal. Also last month, Guinea, Mauritius and Madagascar purchased 35,800 tons of rice under P.L. 480. The following table summarizes the current status of this year's P.L.-480 program.

PULSES

DEVELOPMENTS AFFECTING U.S. EXPORTS

****Thailand:** A Japanese team is expected in Thailand in late July to meet with the Thai Maize Producers and Traders Association over the manner of upgrading the quality of Thailand's black matpe bean exports in an attempt to make them more competitive with Burmese-origin beans. The latter were characterized as having eroded Thailand's traditional share of the Japanese market--Thailand's biggest for such pulse exports. Total black matpe bean exports in 1982 came to 59,636 tons, down slightly from the 63,062 tons exported the previous year. The following table breaks out Thailand's trade in pulses.

THAI PULSE EXPORTS (JANUARY/DECEMBER--TONS)

	1981	1982	January-March	
			1982	1983
Mungbeans	109,710	132,421	62,551	41,944

WORLD GRAIN SITUATION/OUTLOOK

Beginning with this issue world trade in coarse grains will be reported on an October-September year instead of the July-June year that has been customary in the past. Detailed trade data for the October-September 1979/80-1983/84 period are provided. Trade statistics on an October-September year basis will correspond to the U.S. corn and sorghum marketing years. The United States represents the bulk of the world coarse grain production and trade.

Developments over the past month point to upward potential in forecast world wheat supplies, increasing competition for limited export markets and a great deal of uncertainty surrounding world import demand--particularly about the requirements of major importers such as the Soviet Union, India, and China. On the other hand, uncertainty of supply dominates the world coarse grain outlook. World coarse grain demand is expected to increase because of weather problems in a number of importing countries and some limited expansion in feed use relative to last season's generally depressed levels. Major developments affecting the world grain supply and demand include:

--Continued uncertainty surrounding the deteriorating U.S. corn crop has strengthened prices, triggering reserves for corn and sorghum; over half of these supplies are committed to the PIK program.

--The world corn/sorghum price relationship could induce major coarse grain buyers to use sorghum for a larger portion of their coarse grain requirements.

--Coarse grain import demand is expected to increase relative to 1982/83 depressed levels, but higher grain prices have somewhat dampened anticipated 1983/84 demand from the levels forecast last month. Most of the increases are due to weather-related crop problems in South Africa, Western Europe, Eastern Europe, the Philippines, and North Africa. However some expansion in feed use is expected in South Korea, Indonesia, and some Middle Eastern countries.

--Conditions over the past month point to a significant increase in Canadian wheat production. Australian and Argentine wheat output is still forecast at near-record levels, but with upward potential. Canada and Australia have already begun to aggressively market anticipated increased availabilities, and Argentina has sizable old crop wheat supplies available to market through November.

--The EC decision to limit wheat intervention stocks to 3 million tons for the first quarter of their marketing year may add to pressure to export surplus wheat production.

--The recent renegotiation of the U.S.-USSR Grain Agreement, containing higher minimum commitments, has raised hopes of Soviet near-term purchases. However, good Soviet crop prospects and lower than expected overall buying activity point to a lower level of Soviet grain purchases in 1983/84.

--Agreement on the U.S.-Chinese textile trade issue has renewed hopes of additional Chinese grain purchases from the United States. While China has bought significant quantities of wheat from competitor countries for delivery for the balance of the year there still appears to be room for U.S. sales.

--Improved monsoon conditions raise questions about overall Indian grain import requirements.

WHEAT

Major Importers

Prospects for world wheat and flour imports for the July-June 1983/84 year remain essentially unchanged from last month, totaling about a half a million tons above the 1982/83 level of almost 98 million tons. Brazil is expected to import just over 4 million tons of wheat, up slightly from the earlier estimate. Wheat imports forecast for the USSR, China, and India remain unchanged.

Major Exporters Outside the United States

Favorable weather conditions on the Canadian prairies have greatly enhanced potential wheat yields. The 1983 Canadian wheat crop is now expected to reach 30 million tons, more than 2 million above last year's record level. This large outturn will intensify pressure to export surplus wheat. The Canadians however, are likely to face difficulties in marketing much more than the current season's movement of just over 21 million tons of wheat, unless world demand strengthens.

Australian wheat prospects remain favorable. Considerable upward potential exists in the current Australian production forecast of 17 million tons if timely rains continue over the next two months. The Argentine wheat crop is also in good condition with sowing virtually complete and expected to reach last season's record area. Approximately 1 million tons of Argentine old crop wheat remain to be sold.

U.S. Trade Prospects

Forecast record and/or near-record crops in Canada, Australia, and Argentina, combined with uncertain or decreased wheat purchase levels by several major importers, point to intensified competition for limited export markets this season. Prospects for U.S. wheat sales to China and the Soviet Union have improved somewhat over the past month. The renegotiated U.S.-Soviet long-term grain agreement, with higher minimum commitments, has increased optimism for significant future sales to the USSR. The textile agreement with China, also reached last month, should help bring China back into the wheat market. China will have to purchase over 3 million tons of wheat and corn by the end of this calendar year to fulfill the minimum quantities specified in the long-term grain agreement.

The European Community

Financial concerns have prompted the Community to impose a limited subsidized intervention stock program for only 3 million tons of bread-quality wheat, in contrast to the unlimited program of recent years. The additional free market supplies not accepted into intervention from this year's good harvest will consequently add downward pressure to EC market prices, already pressured by large carry-in stocks. Lower EC prices would narrow the gap between EC and world market prices, reduce EC export subsidy costs, and make exports a more attractive internal market support option.

COARSE GRAINS

Major Importers

Prospects for world coarse grain import demand have been dampened somewhat from a month ago, as a result of escalating grain prices reflecting the reduced U.S. corn crop. Where possible, importers are likely to favor increased purchases of grain sorghum and barley, as long as price relationships remain favorable. On an October-September marketing year, total 1983/84 coarse grain demand is expected to show an increase of over 3 million tons above current year levels.

As a result of overall higher prices, import demand of some major importers such as Japan and Taiwan is expected to hold relatively flat. For other importers, reduced crop outturn will necessitate increased imports despite higher prices. A poor corn crop and reduced crop prospects for barley in the EC are expected to increase import needs this year and may reverse the decline in feed grain imports evident over the past few seasons. Due to the much improved crop this year, Soviet coarse grain imports in 1983/84 are expected to remain near this year's reduced level. South Africa, customarily a major exporter of corn, is expected to import about 2 million tons of corn in 1983/84 and will account for a large share of the expected growth in world coarse grain imports.

Major Exporters Outside the United States

Competitor coarse grain exports in October-September 1983/84 are expected to fall somewhat below 1982/83 levels. The Thai and Australian coarse grain crops are expected to recover from last season's drought reduced levels to partially offset dramatically reduced South African exports. The South Africa corn crop appears to be lower than earlier estimated, making additional imports in 1983/84 likely--total South African import needs are now forecast to reach nearly 3 million tons during the May-April 1983/84 period.

Prospects for Canadian barley exports improved with demand strengthening due to anticipated lower Western European output. Canadian corn exports, however, are expected to decline due to hot and dry conditions in Ontario, the major corn producing area. Argentina appears to have very little uncommitted corn available for export until the new crop comes on line in March 1984 but roughly 1 million tons of old crop sorghum may be left uncommitted. Current improved coarse grain prices may encourage additional Argentine sowings. However, planting does not normally start until late November-December. New crop Thai corn should begin to enter the market soon.

U.S. Trade Prospects

The U.S. coarse grain export forecast for 1982/83 has been reduced slightly, reflecting a slowdown in shipments. The outlook for U.S. corn exports in 1983/84 has also declined from last month's estimate, primarily because of the outlook for higher corn prices and lower import forecast in a number of Asian countries. U.S. sorghum is expected to replace a portion of the corn that would normally be shipped to a number of U.S. markets. The U.S. coarse grain export forecast still remains well above the 1982/83 level.

The European Community

Reduced corn and barley crop prospects in key producing countries could mean additional corn and malting barley import demand by the Community in 1983/84. Prospects of lower domestic feedgrain availabilities have consequently caused the Community to curtail its early-season aggressive barley export program by dropping its export subsidy level by more than 50 percent in recent weeks. There had been pressure on Community farmers to move barley stocks into export channels to make room for anticipated large wheat supplies that must be held on farm because of the limited wheat intervention level.

RICE-1982/83

Estimated world rice production in 1982/83 remains unchanged at 418 million tons with the forecast for world rice trade in 1983 also unchanged at 12.6 million tons.

Major Importers

Indonesia continues its hand to mouth buying activity as a result of scarce foreign exchange availability. Indonesia's import commitments are estimated at over 1.3 million tons against an import forecast of 2 million tons. If government stocks flatten at 1.5 million tons or are drawn down within the next 30 days, the current financial limitations restricting the size of Indonesia's rice imports may be eased. The continued purchasing delays, however, will likely result in larger imports in the first quarter of 1984 than were previously anticipated. The estimate of the Brazilian rice crop has been further trimmed this month. The government recently announced restrictive guidelines for issuing import licenses, but no licenses are thought to have yet been issued.

Major Exporters Outside the United States

Outside of China, the 1983 export forecasts for the major exporters remain unchanged this month. Chinese rice exports are unlikely to exceed 700,000 tons in 1983, due to small Indonesian rice purchases from China and the low world rice prices. Estimated export commitments to date are as follows: Thailand 3.2 million tons, Pakistan 1.8 million tons, and Burma over 950,000 tons.

U.S. Trade Prospects

Preliminary export data indicate that 2.15 million tons of rice were shipped in the marketing year which just ended. The U.S. forecast for calendar 1983 remains unchanged at 2.2 million tons.

RICE-1983/84

The world rice production forecast for 1983/84 has been trimmed 300,000 tons this month. The increase in the production forecast for India is offset by the weather-reduced estimates for Burma and Sri Lanka and the lower outturn forecast for Japan.

Production Prospects In Major Producing Countries

Asian monsoon conditions generally improved last month. In July the major rice producing areas in India benefited from normal to above normal July rains. The autumn rice crop in the South should be in the heading stage. The current prospects for the winter rice crop, which should be in the vegetative stage, are good to excellent but adequate and evenly distributed rains are needed during the next two months. In Bangladesh and Pakistan there were heavy rains during late July and early August. Because of previous below normal precipitation levels, Bangladesh's main Aman crop is reported to be in only fair condition. The Pakistani rice crop, however, should be in good to excellent condition.

In Southeast Asia, monsoon conditions also generally improved last month. Thai crop prospects appear good at this time. Rains in the last several weeks benefited the rice growing areas, especially in the Central Plains. Crop prospects in Indochina improved as a result of good rains during mid-July through early August. Growing conditions in Indonesia and the Philippines, however, have not been particularly favorable as the drier-than-normal conditions which were experienced in June continued into early August, diminishing crop prospects. Indonesia's dry season crop should be especially hard hit because irrigation supplies should be largely depleted.

Growing conditions in Southern China and in the Yangtze River Valley have improved in the last several weeks. Only light rains have been experienced in the south, benefiting the harvest of early season rice and the planting of the late season rice crop. Despite earlier unfavorable weather in Guandong province, a record early rice crop of 8.5 million tons is reported, up 3 percent over the previous record set in 1982 due to both higher yields and an expanded acreage. Needed drier weather returned to the Yangtze River Valley last month, but the intermediate and late rice crops need rain during the remainder of August and September. Additional rains are also needed in August in the rice producing regions in South Korea where cumulative rainfall has averaged only 70-75 percent of normal.

World Trade Prospects

World rice trade in 1984 remains tentatively forecast at 11.9 million tons. Import estimates for Brazil and Saudi Arabia were increased this month but these changes were more than offset by reduced import forecasts for the USSR and, to a lesser extent, Mexico. Not only are Russian rice imports projected to decline, improved rice production in the USSR may result in the USSR covering its commitments to Cuba with domestically produced rice.

As a result of the revised forecast of rice availability in India, the decline in world rice ending stocks may be somewhat more limited than forecast last month. Ending stocks for 1983/84 are now forecast to decline to 15.0 million tons or .5 million tons higher than last month's forecast.

U.S. Trade Prospects

U.S. rice exports during 1983/84 (August/July) and calendar year 1984 remain unchanged at 2.2 million tons.

NOTE: "STOCKS AS PERCENT OF UTILIZATION" REPRESENT THE RATIO OF MARKETING YEAR ENDING STOCKS TO TOTAL UTILIZATION.

- 1/ TRADE DATA AS EXPRESSED IN THIS TABLE EXCLUDE INTRA-EC TRADE. WHEAT AND COARSE GRAINS ARE ON A JULY/JUNE TRADE YEAR THROUGH 1975/76. FROM 1976/77 ON, THE TRADE YEAR FOR COARSE GRAINS IS OCTOBER/SEPTEMBER.
- 2/ FOR COUNTRIES FOR WHICH STOCKS DATA ARE NOT AVAILABLE (EXCLUDING THE USSR) UTILIZATION ESTIMATES REPRESENT "APPARENT" UTILIZATION, I.E. INCLUDE ANNUAL STOCK LEVEL ADJUSTMENTS.
- 3/ STOCKS DATA ARE BASED ON AN AGGREGATE OF DIFFERING LOCAL MARKETING YEARS AND SHOULD NOT BE CONSTRUED AS REPRESENTING WORLD STOCK LEVELS AT A FIXED POINT IN TIME. STOCKS DATA ARE NOT AVAILABLE FOR ALL COUNTRIES AND EXCLUDE THOSE SUCH AS THE PEOPLE'S REPUBLIC OF CHINA AND PARTS OF EASTERN EUROPE. WORLD STOCK LEVELS HAVE BEEN ADJUSTED FOR ESTIMATED YEAR-TO-YEAR CHANGES IN USSR GRAIN STOCKS, BUT DO NOT PURPORT TO INCLUDE THE ABSOLUTE LEVEL OF USSR GRAIN STOCKS.
- 4/ PRELIMINARY.
- 5/ PROJECTION.

FOOTNOTES TO WORLD GRAIN SUMMARY AND TRADE TABLES

- 1) Includes wheat flour and products.
- 2) Argentina, Australia, Canada, South Africa and Thailand.
- 3) Adjusted for transshipment through Canadian ports: Excludes products other than flour.
- 4) Wheat, rye, corn, barley, oats, sorghum, millet and mixed grains.
- 5) Production data includes all harvest occurring within the July-June year indicated, except that small grain crops from the early harvesting Northern Hemisphere areas are "moved forward;" i.e., the May 1977 harvests in areas such as India, North Africa and southern United States are actually included in "1977/78" accounting period which begins July 1, 1977, for wheat or October 1, 1977, for coarse grains.
- 6) "Bunker weight" basis; not discounted for excess moisture and foreign material.
- 7) Utilization data are based on an aggregate of differing local marketing years. For countries for which stocks data are not available (excluding the USSR) utilization estimates represent "apparent" utilization; i.e., they are inclusive of annual stock level adjustments.
- 8) Stocks data are based on aggregate of differing local marketing years and should not be construed as representing world stock level at a fixed point in time. Stocks data are not available for all countries and exclude those such as the People's Republic of China, and parts of Eastern Europe: The world stock levels have been adjusted for estimated year-to-year changes in the USSR grain stocks, but do not purport to include the entire absolute level of USSR stocks.
- 9) Inclusive of Soviet stock changes; see footnote 8.

USSR Grain Situation and Outlook

A favorable 1983 USSR grain crop outlook likely will result in the lowest level of Soviet grain imports since 1978/79. Large grain supplies in 1983/84 are expected to result in additional grain utilization. The recently announced new U.S.-USSR Long Term Grain Agreement means that the Soviets now have trading arrangements covering a minimum of around 20 million tons of grain annually.

1983/84 Trade Estimates Unchanged

Estimated USSR grain imports for the 1983/84 marketing year remain unchanged at 30 million tons, the lowest since 1978/79. Wheat imports, projected at 18 million tons, are expected to continue large, while coarse grain imports are expected to fall to 11 million tons. Rice, pulses and miscellaneous grain imports are estimated at 1 million tons.

Recent sales combined with sales carried over from the 1982/83 marketing year suggest the Soviets have covered only slightly more than 5 million tons of their 1983/84 import requirements. The past month has seen some increase in Soviet grain buying activity. No official announcement of Canadian-USSR grain trade has been made; however, sales of around 3 million tons for July-November shipment have been reported with wheat comprising more than two-thirds of the total. Recent reports indicate additional small Argentine sales of wheat and corn to the USSR, possibly totaling less than 500,000 tons. There have also been unconfirmed reports of additional French wheat and barley sales, totaling around 500,000 tons.

With relatively light purchases to date, USSR grain imports for the July-September 1983 quarter may not be much above the year-earlier level of around 5 million tons. With prospects for a bumper 1983 coarse grain harvest, the Soviets have been fairly inactive in the world coarse grain market.

The Soviets have in place a number of LTA's or other trading arrangements which cover around 20 million tons of their annual import requirements.

1982/83 Trade Year Closes Out; Estimates Unchanged

The pace of Soviet grain shipments slowed as the 1982/83 marketing year came to a close. Shipments to the Soviets from all origins totaled slightly over 2 million tons in June, making it the slowest month since October. Argentina was the principal shipper, followed by Canada.

Domestic Utilization Expected to Recover

Record or near-record inventories for most major classes of livestock coupled with prospects for a bumper coarse grain harvest provide the foundation for a projected continued recovery in grain for feed use in the USSR. Although forage supplies are improved and protein meal supplies likely will be up, the Soviets still are expected to feed 123 million tons of grain in 1983/84.

Soviet grain utilization for 1983/84, excluding feed and an allowance for dockage and waste, is projected at 78 million tons, unchanged from recent years. The allowance for dockage and waste has been placed at 10 percent of the projected crop, or 20 million tons. This estimate represents an approximation of the amount of moisture and non-grain material in the crop and any handling and storage losses. The improved grain crop this year also permits the Soviets to rebuild stocks.

Soviet Coarse Grain Supplies Likely the Largest in Years

The Soviets appear to be headed for a bumper coarse grain harvest. Early estimates of the 1983 corn and oats crops point to near record outturns. The 1983 barley crop, the principal Soviet coarse grain, is expected to be well above the level of the past 4 years, but still well short of the record.

In addition, Soviet coarse grain imports, although projected to be the smallest since 1978/79, will likely continue to be significant at 11 million tons. The Soviets have a number of trading agreements which include coarse grains. Among these are:

- The new U.S.-USSR LTA (Oct.-Sept.) which provides for minimum sales of 4 million tons of corn.
- An Argentine grain agreement (Jan.-Dec.) covering minimum coarse grain trade of 4 million tons.
- Brazil's calendar agreement provides for annual sales of 500,000 tons of corn.
- Thailand is to ship the Soviets 100,000-200,000 tons of corn annually under their trading arrangement.
- The Canadian Grain Agreement with the USSR specifies a minimum of 5 million tons of "grain." In the first 2 years of the agreement, Canadian sales of coarse grains to the Soviets have averaged 2-3 million tons.

These agreements, if fulfilled, would cover the bulk of the Soviet's forecast coarse grain import requirements over the next year.

Livestock Sector Continues Gain

Higher livestock inventories show that the Soviets are counting on improved feed prospects to support increased meat production. As shown in the following table, hog numbers at mid-year continued to run about 5 percent higher than last July 1. Poultry and cattle numbers were up about 2 percent. With the half-year increases already registered in meat production, the higher inventories, and improved feed prospects, total meat output could exceed the 1978 record of 15.5 million tons.

USSR: Livestock Numbers in the Socialized Sector, July 1, 1975-83

Year	Total Cattle	Of Which Cows	Hogs	Sheep and Goats	Poultry
---million head---					
1975	86.6	27.5	55.6	146.8	573.3
1976	89.2	28.2	47.4	141.6	509.6
1977	90.2	28.8	52.8	144.4	597.1
1978	91.6	29.3	56.4	145.5	644.6
1979	92.8	29.6	57.0	146.3	685.8

1981	94.3	30.0	56.9	143.9	735.8
1982	94.9	30.1	56.6	141.5	751.1
1983	96.4	30.0	59.3	143.7	766.2

New U.S.-USSR LTA Announced

On July 18, 1983, it was announced that the United States and the USSR had reached an agreement in principle on a new Long Term Grain Agreement (LTA). The current agreement expires September 30, 1983. The general framework of the new LTA follows that of the original agreement that was signed in 1975. Formal signing of the new LTA will take place in late August. Some of the major provisions are:

- The new agreement is for 5 years, commencing October 1, 1983.
- The Soviet Union will purchase from the U.S. a minimum of nine million tons of wheat and corn annually with the provision that up to one million tons of the minimum could be satisfied by Soviet purchases of 500,000 tons of soybeans and/or soybean meal. If the soybean/soybean meal option is exercised in any year, the minimum of wheat and corn for that year will be 8 million tons.
- During any year of the agreement, the Soviet Union may purchase an additional three million tons of wheat and/or corn in addition to the nine million without prior consultation.

Crop Outlook Continues Good

The 1983 grain crop continues to be estimated at 200 million tons as no major changes have occurred in the past month to alter the outlook. Yield prospects remain significantly better than for any year since 1978. In addition to the generally favorable weather, greater inputs of fertilizer and increased fallow are also having a beneficial impact on yields. The improved yield outlook more than offsets this year's small grain area.

The 200-million-ton estimate includes 85 million in wheat, 103 million in coarse grains and 12 million in miscellaneous grains and pulses. These are unchanged, as are the estimates of winter grain output at 55 million tons, and spring grains at 145 million.

The 1983 area estimate of 122 million hectares comprises 52 million of wheat—the smallest in 3 decades--61 million of coarse grains; and 9 million of miscellaneous grains and pulses. The estimated area of winter grains is 29 million hectares and spring grains, 93 million.

A preliminary area figure for the 1983 crop of 122.5 million hectares was published in the USSR Mid-Year Plan Fullfillment Report on July 23. The preliminary figure for the 1982 crop was 123.9 million hectares, and the final was 123.0 million. Because of the overall smaller planted area this year and the quick harvest pace the difference between the preliminary and final area figures might be small again, continuing the trend of the last 2 years as shown below.

The smaller area for the 1983 crop is most likely the result of the Soviet policy to increase fallow. While reducing potential production in a given year, fallow actually raises yield potential the next year, by improving moisture supplies which would increase fertilizer response. Some 17.4 million hectares were under fallow in 1982, and 20.3 million was planned for 1983. Chemical fertilizer production in the USSR during the first 6 months of the year was increased by 9 percent over the comparable period a year ago. Early this season, the Soviets announced that pulses, barley and corn would receive larger applications of chemical fertilizer.

USSR: PRELIMINARY AND FINAL GRAIN AREA DATA

(Millions of Hectares)

<u>Year</u>	<u>Preliminary Area</u>	<u>Final Area</u>	<u>Difference</u>
1975	131.0	127.9	3.1
1976	131.0	127.8	3.2
1977	131.5	130.3	1.2
1978	131.7	128.5	3.2
1979	130.2	126.4	3.8
1980	130.0	126.6	3.4
1981	126.4	125.6	0.8
1982	123.9	123.0	0.9
1983	122.5		

Moisture supplies have been quite favorable this year for spring barley, the major coarse grain crop in the USSR. Corn, on the other hand, began the season with short moisture reserves and has had to rely on timely rains, and, therefore, probably developed a deeper root system. As a part of their program to increase the area of corn grown under "industrial crop technology," the Soviets have been planting more of the crop on irrigated land.

As a result of the early season, harvest progress continued well ahead of normal as of August 8. Small grains and pulses had been cut on 51.3 million hectares, substantially more than in any year except the hot, dry year of 1981 when 57.2 million hectares had been cut. No reports have been noted about weeds or any problem that would affect the quality of the harvest. The Soviets have complained about "unjustifiable slowness" of the harvest because of poor organization in Moldavia and several import oblasts in the Ukraine - Zaporozhe, Nikolayev, Donetsk and Cherkassy. Reports of short, stunted grain in Zaporozhe and Dnepropetrovsk have been noted, implying less than satisfactory yields. But there have also been reports of lodging in other areas, which in the Soviet context of measuring yields in terms of bunkerweight, implies good production. One high-ranking official of the RSFSR recently stated that "somewhat higher" production is expected this year in that republic.

In preparation for the 1984 season, 24.6 million hectares of land reportedly had been plowed as of August 8. The optimal time for planting winter grains is rapidly approaching in northern European USSR.

Prepared by the USDA Interagency Task Force on the USSR Grain Situation.

MONTHLY EXPORT RATES FOR U.S. GRAIN AND FEED COMMODITIES
ANNUAL MONTHLY AVERAGES FOR FY 1979 - 1983 (proj)
AND MONTHLY FROM DECEMBER 1981 - JUNE 1983

****HIGHLIGHTS****

Over the past month the outlook for U.S. grain trade has undergone some changes. Corn sales have been particularly strong as some buyers have reacted to deteriorating U.S. crop prospects by booking early. However, total U.S. coarse grain exports for 1983/84 have been reduced somewhat from the earlier estimate, reflecting a slowdown in the growth for imported corn, due to strengthening prices.

The wheat market is still characterized by large supply and weak import demand. There still have been no sales to the USSR, China nor India. The absence of these countries from the U.S. marketplace, along with aggressive marketing practices by our competitors, continues to weigh on U.S. wheat export prospects.

- World wheat export competition continues to intensify as world export supplies swell, not only in the major wheat shipping countries, such as Canada and Australia, but in lesser exporters such as Austria and Pakistan. Aggressive marketing of these increased supplies will put additional pressure on U.S. wheat exports in world markets.
- The EC is actively working to move its large exportable supplies of wheat, as evidenced by the current trend of export registration and its recent sale to Egypt. Egypt has usually imported flour from the EC.
- Another month has passed without U.S. wheat sales to either the USSR, China or India. Last year these markets accounted for nearly 30 percent of total U.S. wheat trade. The portion of U.S. total exports going to these destinations may decline this year as expected increases in sales to the USSR will not offset the likelihood of smaller sales to China and India.
- In a number of countries, such as Zimbabwe and Portugal, governments are raising producer grain payment levels to encourage production and help compensate for the current drought reduced crops.
- Increasing quantities of EC barley are moving into intervention stocks and export channels. At the same time, it appears the EC may need to import significant quantities of malting barley to supplement a reduced crop.
- World rice prices have begun to increase and are narrowing the gap between world, and the considerably higher U.S. prices.
- Improved monsoon conditions point to better rice outturn in India than originally anticipated.

****WHEAT****

LATEST U.S. EXPORT FORECAST, SHIPMENTS AND SALES

Export Forecast. As of August 15, the official forecast for 1983/84 (June-May) wheat exports--excluding 2 million tons of products--remains at 36.1 million tons.

Shipments and Sales. Shipments and sales of U.S. wheat for the four-week period ending August 18 remained slow. Near-term U.S. wheat shipments are primarily to major U.S. markets in Asia, such as Taiwan, Korea, the Philippines and Japan.

IMPORTER BUYING ACTIVITY

Purchasing activity in the world market remained slow during the last month with no major purchases evident by the larger importing countries. Japan remained active making several purchases from the United States, Canada and Australia. The Philippines and Korea continued to make routine purchases as well as Lebanon, Tunisia and Peru. Brazil and Egypt also made purchases but for amounts below last month's levels. The Soviet Union, China and India remained absent from the world market.

MARKET OPPORTUNITIES

***Lebanon:** The Lebanese dispute with the Canadian Wheat Board over prices remains unresolved and Lebanon has been purchasing from other suppliers. To date Lebanon has bought 75,000 tons of U.S. Hard Red Winter wheat, compared to 50,000 tons in CY 1982. Lebanon is expected to purchase an additional 75,000-100,000 tons of hard wheat by the end of the year, which could be met by U.S. suppliers if the dispute with Canada continues. The Lebanese have made no purchases from Canada to date and reports indicate no settlement is in sight. Lebanon should have purchased about 150,000 tons of Canadian wheat in 1984, according to the Canadian-Lebanese long-term agreement (1981-1985). A Canadian Wheat Board Team is expected to arrive in Lebanon in the near future to continue discussions on the matter.

OTHER DEVELOPMENTS AFFECTING U.S. EXPORTS

Other Exporting Countries Selling Activity and Competitive Practices

****Pakistan:** According to the Food and Agriculture Minister, a record wheat crop of 12.3 million tons in 1983/84 should provide Pakistan with an exportable surplus of around 500,000 tons, after satisfying the 1.5 million ton reserve required to protect against domestic shortages. Pakistan currently receives around 400,000 tons of wheat a year, through, as donations and grants from international agencies and developed countries for the Afghan refugees. Good crops in the past two years have allowed Pakistan to export an average of 150,000 tons of wheat a year.

****Australia:** The Australian Wheat Board (AWB) recently completed a marketing and technical mission to the Philippines and Korea. AWB personnel met with government representatives and milling industry officials to discuss the suitability of Australian wheat for the Philippine and Korean markets, while stressing the geographic advantage Australia has as a wheat supplier to this region. Traditionally, the United States has enjoyed a virtual monopoly in wheat exports to both countries.

****European Community:** Lower EC wheat prices and the strengthening U.S. dollar mean reduced EC export subsidy costs and the likelihood of a more aggressive EC export program for wheat. Through mid-August, the EC has authorized 2.3 million tons of wheat for export, nearly 50 percent ahead of last year's pace. A combination of the rising value of the dollar and current lower internal EC wheat market prices, as a result of the on-going harvest and limited intervention, has enabled the EC to cut its export subsidy in half in recent weeks to about \$26 dollars per ton.

****Australia:** Negotiations were recently held with Yemen PDR, Australia's largest market for bagged wheat. Australia has an annual supply contract with Yemen and is expected to ship 120,000-130,000 tons of wheat in 1984. As part of the Australian Wheat Board's continuing program of technical assistance to Yemen, the Board's technical services manager will visit Yemen to advise on silo construction, as part of longer term plans to improve grain handling facilities.

****France:** French traders report that the Soviet Union purchased about 650,000 tons of French wheat for near-by delivery. The sales would be against a French-USSR trade accord signed in October 1982. France shipped just over 3 million tons of wheat to the Soviets in July-June 1982/83, but sales may be down this year as Soviet wheat import demand is projected to decline.

****Austria:** A record, good-quality grain crop will likely result in about 800,000 tons of Austrian exports, primarily wheat. This is over 100,000 tons above last season's high export level. In previous years, Austria generally exported about 200,000 tons of grain annually to neighboring countries. The Austrians have scheduled negotiations with the USSR and Poland regarding grain shipments, and talks with East Germany and Czechoslovakia are expected.

Competitive Developments in Selected Foreign Markets

****Morocco:** Moroccan milling industry officials are pressuring the government to purchase more U.S. Hard Red Winter wheat instead of French

wheat. Reportedly, quality and mixing characteristics of U.S. wheat allow increased product yields, making U.S. wheat cheaper to use despite the lower subsidized price of French wheat. In 1982/83, Morocco imported 1.5 million tons of wheat from the United States out of total imports of 1.8 million. This year, Moroccan purchases of U.S. wheat could decline because of increased competition from the European Community.

****Saudi Arabia:** Traditionally an importer of U.S. wheat, Saudi Arabia, expects to reach self-sufficiency in wheat during the 1984/85 year. In 1983/84, the Saudis are expected to import 650,000 tons of wheat and wheat flour. The United States will likely supply around 300,000 tons, mainly wheat. Saudi Arabia currently consumes around 8 million tons of wheat and imports another 350,000 tons of specialty flour (from soft wheat) for domestic consumption. If self-sufficiency is reached next year, soft-wheat flour will continue to be purchased (mainly from the EC), but wheat imports from the U.S. could be reduced significantly.

****Malaysia:** The United States is likely to face considerable competition in the Malaysian wheat market this season, given large anticipated Australian supplies. Malaysian purchases of U.S. wheat relative to total imports held steady in 1982/83 at about one-quarter of the Malaysian market, or roughly 100,000 tons. Canadian, French and South African supplies filled the gap left by lower Australian wheat exports to Malaysia.

****China:** China and the United States resolved their dispute over Chinese textile exports to the United States with the signing of a five-year textile agreement on August 18. Resolution of the dispute could lead to a resumption of Chinese purchases of U.S. wheat and other grains. Although required to purchase at least 6 million tons of grain annually under the long-term grain agreement, China has bought only 2.6 million tons of grain so far this calendar year.

****Republic of Korea:** According to industry sources, Korea is expected to change certain regulations governing flour milling. Beginning in September, individual mills are expected to be given direct authority to import wheat. Most mills are expected to continue buying through the Korean Flour Mills Industrial Association. This action may not result in any immediate diversification of supply sources. In the long run, however, it will most likely help U.S. competitors, particularly Australia, enter the Korean wheat market. Australia has actively pursued the Korean market, offering a trial load of wheat in 1981/82 and more recently sending a technical team to Korea. Additional expected Korean policy changes include:

- Abolishment of government specifications for the four types of flour previously authorized to be produced. Mills will now be able to produce any type of flour.
- Elimination of the fixed extraction rate, currently at 77 percent, to allow better quality flour to be produced. Consumption is expected to increase with the production of better quality flour.
- Deregulation of flour prices at all distribution levels, leaving prices to be set by market forces. Initially some price cutting is expected, but basically prices are expected to remain near current levels.
- Possibly allowing wheat flour imports to enter Korea after 1985.

****South Africa:** Some rainfall in wheat growing areas appears to have stabilized the crop situation, possibly preventing further drought damage. This is likely to reduce potential South African wheat import requirements, currently estimated at about 100,000 tons. Importer cancellation of roughly half of the expected October-September 1982/83 South African export level also eases 1983 import needs. South African new crop wheat should become available in October.

****Egypt:** Reportedly, Egypt has purchased 225,000 tons of EC wheat for 1983/84 shipment. In the past, Egypt has primarily purchased EC flour. EC wheat exports to Egypt were only about 100,000 tons in 1982/83.

****China:** Stepped up imports have caused congestion at a number of Chinese ports and the inability of China's inland transportation system to keep pace is delaying the discharge and movement of grain into consumption channels. This situation has persisted for some time, and it is not known when China's grain import activities will return to normal.

Internal Price Policies of Foreign Countries

****Canada:** The Canadian Wheat Board recently announced initial payment levels for the various grades of Canadian grain. Base initial payments for No. 1 Canadian Western Red Spring and No. 1 Durum had been announced earlier. The 1983/84 Canada feed wheat payment is discounted nearly 19 percent relative to No. 1 CWRS, compared to last season's 16.5 percent differential, when the Canadian Wheat Board had an unusually high proportion of feed wheat to market from the 1982 crop. The 1983 payment differentials and the lower base payment level will give the Canadian Wheat Board added pricing flexibility in marketing 1983/84 wheat supplies. Current projections suggest that Canada may be faced with an all time high wheat export availability for 1983/84.

CANADIAN INITIAL PAYMENTS

Grain	1982/83 C\$/MT	Percent Discount	1983/84 C\$/MT	Percent Discount
No. 1 CWRS	174.50		170.00	
No. 2 CWRS	168.71	3.4	164.21	3.5
No. 3 CWRS	163.71	6.3	159.21	6.4
No. 1 Canada Utility	159.71	8.5	155.21	8.7
No. 2 Canada Utility	148.71	14.8	144.21	15.2
Canada Feed	145.71	16.5	138.21	18.7
No. 1 Durum	174.50		165.00	
No. 2 Durum	171.71	1.6	162.21	1.7
No. 3 Durum	169.71	2.8	160.21	3.0

****Poland:** Higher official procurement prices are expected to increase relative availabilities of domestic wheat this season, despite expectations that the 1983 Polish wheat crop will likely remain at about last year's level. Poor procurement from the 1982 crop was met with an increase in procurement prices for the current wheat crop of over 40 percent. As of July 1983, Polish farmers will receive roughly \$235/ton. Polish 1983 wheat import needs are expected to fall about 500,000 tons below last year's level, because of increased procurements, to about 2.5 million tons.

****Jordan:** Despite budgetary cutbacks, Jordan is not expected to lower its high domestic wheat production subsidies. The government purchases approximately 40,000-50,000 tons of local wheat at the fixed price of roughly \$328/ton for low quality wheat and \$355/ton for higher quality wheat. In comparison, the average price for imported No. 2 U.S. Hard Red Winter wheat was about \$195/ton. U.S. wheat exports to Jordan of about 300,000 tons in July-June 1982/83 represented about three-quarters of total Jordanian wheat imports.

****Major Exporters:** The latest internal support prices for the principal world wheat exporters, basis individual marketing years, are listed below. Prices are not strictly comparable because of quality differences and because U.S., Argentine and EC prices are on a local delivery point basis, while Canadian and Australian prices are basis export position. For example, in terms of quality differentials, the Canadian price in 1982/83 is for No.1 CWRS, which only represented 25 percent of the 1982 crop; Canadian No.2 CWRS was discounted by approximately C\$6 per ton and No.3 CWRS by about C\$11 per ton. EC prices given below do not include monthly storage payments that all producers receive.

U.S. EXPORT EXPANSION ACTIVITY

****Brazil:** U.S. Department of Agriculture officials met with representatives of the Brazilian Wheat Board this month in Rio de Janeiro to discuss agricultural trade between the two countries. Credit availabilities and anticipated import levels from the United States were reviewed, as well as Brazilian requests for further credits. Plans were made for another round of agricultural trade negotiations during September.

CORN AND SORGHUM

LATEST U.S. EXPORT FORECAST, SHIPMENTS AND SALES

Export Forecast. As of August 15, the official 1982/83 (October-September) U.S. corn export forecast (excluding products) was reduced by 1.27 million metric tons, reflecting a slowdown in shipments. At the same time the forecast for 1983/84 exports was also reduced by 1.27 tons to reflect escalating U.S. prices and a resulting lower import forecast in a number of Asian countries.

U.S. sorghum exports in 1983/84 (October-September) are projected to remain unchanged from last month's estimate of 6.35 million tons, but still more than a million tons above the 1982/83 level.

Shipments and Sales. U.S. shipments of corn declined for the fourth consecutive month. The pace of U.S. corn sales, however, has increased significantly this month, jumping by about 3 million tons as compared to the previous four-week period. Sorghum exports jumped to 600,000 tons, well above the quantity shipped last month.

IMPORTER BUYING ACTIVITY

Sales of corn, mostly for delivery in 1983/84, were up sharply as a number of buyers, especially Japan, are buying forward in anticipation of a continued strengthening in prices. The current favorable sorghum-corn price relationship may result in the substitution of some sorghum for a portion of the corn that would normally be shipped to a number of U.S. markets.

MARKET OPPORTUNITIES

**Poland: Financial constraints have dramatically reduced Polish agricultural imports from Western countries since 1981. In response to this situation, the U.S. Agricultural Trade Office in Warsaw has made efforts to develop deferred-payment schemes which would involve supplies of U.S. feed for Poland's swine producers, to be repaid from revenues generated by additional

exports of Polish canned hams to the United States. These efforts have met with some success. Recently a trade protocol valued at about \$6 million was signed by Central Soya and various Polish agencies, starting a pilot project to feed 400,000 pigs using Central Soya feed products and technology. The precedent may open the door for similar arrangements by other companies and enable further expansion of U.S.-Polish agricultural trade.

****South Africa:** Indications are that South Africa's grain sorghum crop, severely damaged by the persistent drought, may fall well short of domestic demand. Sorghum is used for malting purposes and for feed, with consumption at about 400,000-500,000 tons in recent years. No import decisions have yet been announced.

OTHER DEVELOPMENTS AFFECTING U.S. EXPORTS

Other Exporting Countries' Selling Activities and Competitive Practices

****Uruguay:** Reports indicate that Uruguay and Taiwan have signed a long-term trade agreement. Details are not yet available, but the agreement is believed to cover calendar years 1983-1986 and include corn, sorghum, wheat and other agricultural commodities. Annual Taiwanese purchases could reach 60,000 tons of corn, 35,000-50,000 tons of sorghum and 50,000 tons of wheat. In 1982/83, total Taiwanese corn and sorghum imports reached nearly 4 million tons, and imports of wheat were about 650,000 tons. The U.S. supplied nearly 90 percent of Taiwan's total grain import needs in 1982/83. The Uruguayan trade agreement is not expected to substantially affect U.S.-Taiwanese trade flows.

****Thailand:** Thai Ministry of Commerce officials have announced a change in corn trade policy for the 1983/84 season. Thailand will attempt to move away from its traditional reliance on supply agreements and barter arrangements. Reports indicate that even Japan, one of Thailand's major buyers, is likely to be offered the option of buying on a free-trade basis instead of within the framework of an export agreement. The Thailand Maize and Produce Traders Association has also come out publicly against the negotiation of any long-term contracts--specifically with Japan, China and Taiwan--because of price-related problems associated with many of the previously negotiated agreements. Reportedly China has recently purchased 100,000 tons of Thai corn from the private trade. In the past, Thai barter arrangements facilitated trade with the USSR and Eastern Bloc countries; Thailand traded corn in return for fertilizer. Thailand appears to be moving away from this type of barter because of current strong corn prices and adequate local supply of fertilizer.

****Canada:** Hot, dry conditions in Canadian corn producing areas have apparently lowered crop prospects, and corn export availabilities in 1983/84 are likely to be reduced. Canadian 1982/83 corn exports appear to have fallen to about half of the level of the previous two seasons because of a notable absence of Soviet buying. In the past, Canada has primarily supplied Cuban needs, and corn exports to the USSR grew during the U.S. grain embargo period. Though Soviet buying fell off in 1982/83, Canada began exporting larger amounts to Spain and Iran. Italy and East Germany also purchased Canadian corn in 1982/83 for the first time in many years. Canadian August-July 1983/84 corn exports may only reach 300,000 tons.

Competitive Developments in Selected Foreign Markets

****Malaysia:** Stronger than earlier anticipated growth in both poultry and swine industries in 1982/83 lead to optimism for continued expansion in 1983/84. In addition, current Malaysian interest in purchasing breeding swine from the U.S. indicates that present growth rates could continue. Malaysian corn imports in 1982/83 were larger than anticipated, and it appears that the million-ton corn import level will probably be reached in the current marketing year. Thailand remains Malaysia's primary supplier; however, a substantial quantity of Argentine corn and some U.S. corn was imported in the first quarter of 1983.

****USSR:** A new U.S.-USSR long-term grain agreement was signed on August 25, 1983 in Moscow. The agreement covers the period October 1, 1983-September 30, 1988. Under the agreement, the USSR shall purchase annually 9 million tons of wheat and corn. "The Soviets may purchase, on account of the said quantity, soybeans and/or soybean meal produced in the United States, in the proportion of one ton of soybeans and/or soybean meal for 2 tons of grain." In any case the Soviets must purchase no less than 4 million tons of both wheat and corn. The Soviets may purchase an additional 3 million tons of wheat and/or corn without prior consultations.

****El Salvador:** Reports indicate that El Salvador is currently facing a serious shortage of white corn, a staple food in the diet of the vast majority of the population. Last year's bad weather and the current drought have severely reduced available supplies. The 1983 harvest was only about 400,000 tons, whereas domestic consumption of white corn is about 450,000-500,000 tons annually. Carry-over stocks leave an estimated shortfall of roughly 40,000-90,000 tons. El Salvador's continuing foreign exchange difficulties may limit its ability to import sufficient quantities.

Internal Price Policies of Foreign Countries

****Portugal:** Sharply higher feed costs, resulting from the removal of subsidies on most agricultural grain materials and food products, are expected to reduce 1983/84 feed demand by 300,000 tons to 2 million tons. The United States has traditionally been the sole supplier of corn to Portugal.

****Zimbabwe:** The government of Zimbabwe has significantly increased producer payment levels for corn and sorghum to be marketed in April-March 1984/85.

Both corn and sorghum prices were increased to about \$134/ton, each up 16.6 percent. Usually payment levels are announced in March or April, closer to harvesting time. The unusual preplanting announcements are an attempt to stimulate production levels after last season's farmer perceived disappointing price levels and help compensate for the severely drought reduced output this season.

Zimbabwe has produced about 2-3 million tons of corn and sorghum over the past few seasons, with exports reaching 400,000-500,000 tons annually. This season the expected crop outturn will fall well below 1 million tons, eliminating exports. In addition, Zimbabwe's new budget has eliminated food subsidies (with the exception of beef), and there are fears that increased producer payments may translate into unacceptably high consumer prices for staple food items.

**South Africa: The South African government has reduced controlled fuel prices, and the lower diesel prices are expected to decrease costs for corn farmers by about R5/hectare (about \$4.50), or about R2/ton, which is 1.2 percent of the producers payment levels of R167.50/ton (about \$150/ton).

****BARLEY, OATS AND RYE****

LATEST U.S. EXPORT FORECAST, SHIPMENTS AND SALES

U.S. barley sales continue to run ahead of year-ago levels with Japan and Taiwan reported as its principal takers. The oat and rye export markets continue in the doldrums.

MARKET OPPORTUNITIES:

**Turkey: A Turkish barley team is expected to arrive in Washington D.C. near the end of August to investigate the possibility of purchasing 200,000-300,000 tons of U.S. barley. This move was precipitated by the reduced barley crop in Turkey this year, which led to smaller government procurements. Turkey exported 700,000 tons of barley in 1982/83 from a record crop of 6.4 million tons. Because of the smaller crop this year--estimated at about 6 million tons--Turkey is expected to export only around 300,000 tons to traditional markets, primarily Iran.

**Japan: Reports indicate that 1983/84 U.S. barley exports to Japan could increase substantially from the 140,000 tons supplied in 1982/83. Reportedly, Australia's inability to supply the 650,000 tons of barley stipulated in their annual supply contract with Japan in 1982/83 has reduced Japanese interest in purchases from Australia in 1983/84. Total Australian exports reached only 142,000 tons in July-June 1982/83 and are expected to reach 300,000 tons in 1983/84. Canada remains Japan's single largest barley supplier at 950,000 tons annually, and the U.S. may replace Australia as the second largest supplier.

DEVELOPMENTS AFFECTING U.S. EXPORTS

Exporting Countries' Selling Activities and Competitive Practices

****Canada:** Canadian barley exports in August-July 1983/84 are expected to reach 6.0 million tons, half-a-million above 1982/83 levels. This is largely due to increased European demand for malting barley resulting from expected lower production.

****Sweden:** An abundant and good quality oat crop combined with reduced exports to traditional buyers leaves Sweden with a 160,000 ton oat surplus this season. Hard currency constraints may have limited buying by traditional markets like Poland and East Germany. The debate over whether or not to bear the cost of storing the surplus has been resolved with the decision to subsidize the price of dehulled oats for poultry feed by about \$1.62/100 kg. this will likely increase domestic utilization at the expense of U.S. corn imports. They will also continue to export as much as possible, but decided not to begin subsidizing exports. Recently 7,000 tons of Swedish oats entered the U.S. Some of the surplus oats will be denoted for food aid and any remaining supplies will be stored.

Competitive Developments in Selected Foreign Markets

****Republic of Korea:** Korea announced a reversal of its previous decision to import 50,000 tons of barley, likely of Canadian origin. Reports indicate pressure from domestic producers was responsible for the reversal. Korea has not imported barley since 1977/78.

****EC:** Increasing quantities of EC barley are moving into intervention stocks and export channels amidst uncertainties over EC wheat intervention policies. For example, more than 100,000 tons of new crop winter barley have already been offered into West German intervention, which is more than double the quantity offered last year at this time. EC export authorizations for barley have accelerated in recent weeks and, at over 200,000 tons, are more than double last year's pace. The recently announced limited wheat intervention policy for the first three months of the new season means that unusually large quantities of wheat will initially have to be stored on-farm and in commercial storage facilities where barley is presently stored.

At the same time reports are emerging that the EC has bought 150,000-200,000 tons of malting barley from New Zealand, Canada and Australia. These reports lend support to the possibility that the EC may need to import as much as 500,000 tons of malting barley this season to supplement a shortfall in production.

****RICE****

LATEST U.S. EXPORT FORECAST, SHIPMENTS AND SALES 1/

Export Forecast. U.S. rice exports in 1983/84 (August-July) continue to be forecast at 2.2 million tons (milled rice basis), unchanged from the July estimate. This compares with an estimated 2.15 million tons exported in 1982/83.

Shipments. U.S. rice exports during the four-week period ending August 18 rebounded to 213,100 tons, compared to the low previous four-week total of 164,900 tons. Major destinations included Nigeria, Peru, Morocco and Korea. Rice shipments for the new marketing year totaled 128,800 tons compared to 142,500 tons shipped as of the same period one year ago.

Sales. Export sales registrations for 1983/84 delivery through August 18 totaled 642,500 tons, including approximately 400,000 tons carried over from 1982/83. As of the same date one year ago, 501,000 tons were registered.

IMPORTER BUYING ACTIVITY

Importer buying activity slowed further last month. Buying activity of note included India, Iran, Iraq and Nigeria. Expected buying activity from Brazil, and Indonesia, however, did not materialize. New European trading was modest as buyers waited out further U.S. developments regarding new crop field and milling yields and related price developments.

1/ Shipments and sales data are on a product basis.

****Iraq:** The Iraqi Grain Board's (IGB) recent purchases in the U.S. are believed to have totaled 75,000 tons, bringing total import commitments to about 500,000 tons. With Iraq's import needs fully covered for the year, the IGB is not expected to return to the market for additional purchases for at least a couple of months.

****Iran:** Iranian officials returned to Bangkok last month, making significant rice purchases for fourth quarter delivery. Total Iranian import needs of 650,000 tons are now believed to be largely covered.

****Nigeria:** Purchasing activity continued heavy through early August and then slackened off. Last month's purchases in Thailand are believed to have brought total purchases to nearly 600,000 tons. With heavy imports immediately prior to and during the elections in Nigeria, further purchasing activity is expected to be modest over the next several months as the present large stocks are worked off. Total Nigerian imports in 1983 are forecast to reach between 600,000 and 650,000 tons.

****Indonesia:** Government-held rice stocks, bolstered by import arrivals and additional domestic procurement, rose to over 1.6 million tons at the end of July. This is, however, 1.1 million tons below year earlier levels and represents the lowest level in the last 4 years.

SOURCE: U.S. Export Sales

Apparently constrained by foreign exchange problems, Indonesia has not purchased any additional rice in nearly two months. Import commitments stand at an estimated 1.35 million tons against import needs forecast at 2.0 million tons. If government-held stocks begin to decline soon, however, additional foreign exchange may be allocated for rice imports. Otherwise, Indonesian rice imports may be limited to 1.75 million tons in 1983.

****India:** India has purchased an additional 100,000 tons of Thai rice for nearby shipment under a government to government contract. This brings India's commercial purchases to 220,000 tons against projected purchases of 300,000 tons for 1983 delivery.

MARKET OPPORTUNITIES

****Ecuador:** ENPROVIT, a government buying agency, has issued a tender for 20,000 tons of long grain rice, 15% broken C&F free/out Guayaquil or Tulcan. Written offers should be submitted in Spanish by September 1 (reply September 5); local representation is required.

****Brazil:** In early August, the Brazilian government authorized rice imports and announced that import licenses would be issued for rice purchases that were through (A) arrangements with Latin America countries (B) East European clearing accounts or (C) credit with a minimum term of 3 years. Brazil's rice import needs over the next 6 months are estimated at 600,000 tons. A GSM-102 credit assurances line of \$30 million with 3 year terms was issued in mid-August.

****Peru:** ECASA, the rice import monopoly, has amended its previously issued tender for 60,000 tons of long grain rice for only U.S. origin rice. The new tender is soon expected to be issued for October/November shipment.

OTHER DEVELOPMENTS AFFECTING U.S. EXPORTS

World rice prices have begun to advance in the last few weeks and are beginning to narrow the spread with U.S. rice. U.S. export prices have remained flat as shippers sought to liquidate their holdings on the dock in the recent Iraqi tender and new commercial business has continued to be disappointing. Prices in Thailand, on the other hand, have finally begun to move up. As of August 24, posted prices for top quality rice had advanced \$15/ton in the last month to \$290/ton for 100 percent B and \$280/ton for parboiled 5 percent. Actual prices are currently in line with the posted prices. With the recent Indian sale, the posted prices are likely to be raised again next week.

Only limited additional new sales of top quality Thai rice can be expected over the next few months given that Iran, Iraq and Nigeria are well-covered. New sales of top quality rice will be limited to Singapore, Malaysia, Hong Kong and Syria. On the other hand, it is believed that a lot of short covering is yet to come in the Thai market and the entire complex of prices will rise as Brazil, Indonesia and India enter the market. The magnitude of that rise will depend on the timing and extent of those purchases and the outlook for the 1983/84 Asian rice crop.

**Thailand: The pace of rice shipments increased in late July and early August. This, combined with the low level of rice exported in July of 1982, resulted in a further narrowing of the gap with that shipped one year ago. Through August 6, 20 million tons of rice were exported, 10 percent less than that shipped as of the same date in 1982.

WEEKLY THAI RICE EXPORTS (TONS)

Week Ending	Actual	4-Week Moving Avg.
July 23	64,593	63,667
30	70,129	61,331
August 6	80,598	68,798

Thai export commitments are estimated to be in excess of 3.2 million tons. In addition, Thai government officials have indicated that Bangladesh has approached Thailand to buy 50,000-100,000 tons of rice. Also, a buying team from Malaysia is now expected to arrive August 28 to discuss future purchases of perhaps 100,000. Given the current rate of shipment and sales, Thailand rice exports in 1983 should reach 3.5 million tons.

The Deputy Minister of Commerce was scheduled to head a trade delegation to Senegal, Guinea, Ivory Coast and Niger August 19-31. No reports have been received regarding the results of these visits. The Deputy Minister is quoted as saying that Thailand will promote export sales of its commodities to Africa by extending short and long term credits.

N/A Not available.

****Burma:** It appears that of the 100,000 tons of rice bartered for French locomotives, only 60,000-70,000 tons of rice will actually be shipped. This, when combined with the recent broken tender, brings Burma's estimated export commitments to 950,000 tons. Burma's shipment pace in the last two or three months has been relatively heavy. Through July, an estimated 435,000 tons were exported compared to 367,000 tons during the first seven months last year. Should Burma continue to shipping at this rate, its exports in 1983 will likely reach or exceed 800,000 tons. In 1982 Burma exported 701,348 tons of rice.

****Pakistan:** The Rice Export Corporation of Pakistan (RECP) is rumored to be planning a tender in September for its remaining 28,000 tons of 1982 crop Sind 15/20. Export commitments are currently estimated at 1.18 million tons. Exports for the year will likely reach a record 1.25 million tons.

****India:** The performance of the southwest monsoon improved significantly during the first half of August. The U.S. Agricultural Counselor in New Delhi reports that if rains through mid-September continue to be as bountiful as those experienced recently, the rice crop may top his current estimate of 80.3 million tons.

The Agricultural Counselor forecasts that not only will India import 300,000 tons of rice in 1983 (of which 220,000 tons have already been purchased), but will likely also import 200,000 tons in 1984. Indeed, there are unconfirmed reports that India unsuccessfully sought to purchase 200,000 tons of new crop rice in Pakistan for shipment in late 1983 and early 1984.

Meanwhile, a Soviet trade delegation is expected to visit India in September to negotiate the purchase of the remaining 100,000 ton balance stipulated in the 1983 trade protocol. During the first five months of 1983, India is estimated to have exported 138,000 tons of rice including about 115,000 tons to the USSR.

By the end of August, government-held rice stocks are estimated to have declined to about 2.7-2.8 million tons compared with 3.8 million tons one year ago.

****Senegal:** As the Caisse has recently raised its issue price by 25 percent to CFA 120/kg (\$304/ton) domestic rice demand is now expected to be significantly below earlier forecasts. In addition, given the shipment pace in Bangkok under its government-to-government contract for 320,000 tons, it does not now appear that Senegal will exercise its 50,000 ton option. Thus, 1983 rice imports may only increase to 375,000 tons--up only marginally from the 357,000 tons imported in 1982.

****Italy:** As a result of the varieties planted this year, Italian rice exports will likely be more dependent than normal on brown and rough rice imports under the inward processing scheme. The area planted this year to "superfine" varieties is estimated to have increased by 30 percent. Plantings of "commune" varieties declined by 18 percent and "semi fin" also declined. This reversal in the trend experienced over the last several years reflects the relative profitability of the domestic market where most "superfine" varieties are marketed. The current rice crop is estimated by the U.S. Agricultural Counselor to have again reached about 1.0 million tons. The adverse effects of prolonged rains and cold weather experienced during the

first two months of the growing season were largely reversed by favorable growing conditions in July. Harvesting is expected to commence in-mid September.

****Netherlands:** Dutch trade data through May indicate rice imports have declined 4 percent, but imports of brown long-grain from the U.S. are off 87 percent compared to one year ago. Although higher imports of rice from Belgium and other EC countries were recorded, which are probably U.S. origin, imports of U.S. rice have declined by 19 percent. Direct imports of brown long-grain from Surinam, on the other hand have increased 64 percent with the result that its market share has increased from 36 percent during this period one year ago to 58 percent during the first 5 months of 1983. In addition, there has been a sharp increase this summer in imports of Thai rice due to attractive prices.

****Japan:** Apparently concerned about diminishing surplus rice stocks, Japan has been very slow this year in making new export commitments. To date, export sales have been made on an estimated 165,000 tons. An additional 190,000 tons are currently being negotiated. Further, government officials are reported to be considering reducing next year's rice land diversion program by 10 percent, freeing up an additional 60,000 hectares for rice cultivation.

U.S. EXPORT EXPANSION ACTIVITIES

****GSM-102:** Several new GSM-102 programs were announced in the last month for Peru, Spain and Brazil. The Commodity Credit Corporation (CCC) had available August 19 credit lines totaling \$83.5 million for new rice purchases. The outstanding credit lines were: Iraq \$8.2 million; Portugal \$5.0 million; Trinidad \$2.0 million; North Yemen \$3.3 million; Peru \$25 million; Spain \$10 million; and Brazil \$30 million (including \$15 million for FY 1984).

****Blended Credit:** In the past month, no new blended-credit programs were announced. The CCC had available August 19 credit lines for \$20.7 million of blended credit for rice purchases. The outstanding credit lines included: \$18.2 million for Iraq; \$0.4 million for North Yemen; and \$2.1 million for Jamaica.

****P.L. 480:** In the past month, a new amendment was signed with Indoneisa, the last PL-480 agreement of the fiscal year. Also last month, Bolivia, Tanzania, Peru, Costa Rica and Indonesia purchased 87,000 tons of rice under PL-480. Results of the last PL-480 rice tender (by Senegal) are expected to be available by August 31. The following table summarizes the results of this year's PL-480 program.

September 9, 1983
FG-26-83

WORLD RICE REFERENCE TABLES

Rice is one the world's most important grains. FAO estimates that 1.75 billion people depend on it as a staple food. World rice production has increased from 216 million tons to 418 million tons between 1961/62 and 1982/83. The following tables, however, indicate that the rate of increase for rice production has been much slower than that for wheat and corn. This is in part due to the relatively low, but increasing use of improved inputs (fertilizer, pesticides, etc.) in rice production. In the last decade, because of increased yields, rice's share of world grain production has remained constant at 25 percent.

Approximately 90 percent of the world's rice crop is produced in Asia where output has nearly doubled over the last two decades. During this period, production has increased at a slightly higher rate than population growth. During the 1960's most of the production growth was the result of increases in the area harvested due to expanded double cropping on irrigated land and the expansion of rice cultivation to new areas. In contrast, during the 1970's growth in rice production was predominantly due to yield increases resulting from usage of improved inputs and cultural practices, with the expansion of land under rice cultivation slowing in most countries. The latter reflected rising capital costs for irrigation infrastructure and a growing scarcity of new land which is suitable to rice production. Future production growth is expected to depend increasingly on improved yields.

Reflecting better irrigation systems and a higher use of improved varieties and fertilizer, higher rates of growth in rice production were achieved in North and South America and Oceania. Due to declining yields, the rate of increase in rice production in Africa was much slower than that achieved in Asia, despite a significant increase in the area planted to rice.

Asia is the major rice consuming region. Most of the Asian crop is either consumed on farm or within a few kilometers of where it is produced. Further, except for seed use, only a very small percentage of the crop is carried over into the next year. With over 45 percent of Asian rice area rainfed and only 4-5 percent of world production entering international trade channels, world consumption, trade, and price levels depend crucially on the performance of the Asian monsoon which occurs from May until October.

World rice trade has roughly doubled between 1962 and 1982. As illustrated in the graphs on page 32, while the export side of the market is highly concentrated (5 countries typically account for 65-70 percent of the trade) and dominated by Asian countries, the import side is less concentrated and more geographically dispersed. The U.S. and Thailand dominate the world rice trade, accounting for 47 percent of world exports during the last three years. With the advent of the green revolution (which has been more warmly embraced by Asian rice importers rather than exporters), increased foreign exchange revenues for oil exporting countries, and changing African diets, world rice imports have become less concentrated over the last ten years. Africa and the Middle East now account for about 32 percent of all rice imported compared to about 15 percent in the early 1970's. Less developed countries account for about 60 percent of the import demand.

This publication contains updated and expanded supply-utilization data for 126 countries for the period 1961/62 through 1981/82. It provides a source of information that may be helpful in determining and evaluating future supply-utilization situations. The data, for the most part, are based on official statistics released by the respective governments. Other sources include reports of international organizations and dispatches from U.S. agricultural counselor and attache offices. This data base includes both local marketing and calendar year trade data for each country. Imports from the United States on a calendar-year basis are also presented. This publication updates FG-22-82 of September 1982.

Other h/	4,800	i/	4,800	0	0	0
World	143,500	8,800	68,200	29,700	12,800	19,100

a/ 0-30 cm.

b/ 30-100 cm.

c/ More than 100 cm.

d/ Allocation based on impressions rather than data.

e/ All rice grown during the summer months and shown under wet season.

f/ Including 1,800,000 ha in other countries not separately identified.

g/ Brazil has 6,200,000 ha.

h/ Japan has 2,500,000 ha, the USA has 1,250,000 ha.

i/ Physically included in the irrigated wet season area, but harvested in the dry season as well as the wet.

LDC Rice Area		
Million ha	Key	
72.1		Irrigated
19.2		Dryland
47.5		Rainfed wetland
29.8	0 - 30 cm	- shallow
12.8	30 - 100cm	- deepwater
4.9	above 100cm	- floating
138.8	Total	

Area of rice in developing countries by type of rice culture
drawn proportional to the estimated 1978-80 hectareage.

South		Sept/Nov	March/May)	
Second		Jan/May	June/Aug	

1/ If irrigation available, especially on Java and Bali, rice harvested whole year round and in some locales a third rice crop can be harvested at least once every two years. Java accounts for 62 percent of the total rice crop.

2/ Peninsula Malaysia accounts for about 85 percent of total production.

3/ Roughly 30-33% of the main season crop is grown in the North, Northeast and Central Plains and the South accounts for approximately 7% of the crop. About 85% of the second crop is grown in the Central Plains.

1/ Includes rice destined for seed, waste and feed. As such, in countries where a substantial portion of its consumption needs are produced domestically apparent per capita availability probably exceeds per capita consumption by 10-20%

2/ 1981 unless otherwise indicated.

* Denotes per capita GDP

Source: Population and per capita GNP data from The World Factbook, 1983.

NOTE: Actual milling rates may vary from year to year depending on the quality of the crop and (in the case of exporting countries) the mix of milled rice vs. rice produced.

To convert rough rice to a milled basis, multiply rough rice by the milling rate.

To convert milled rice to rough rice, divide milled rice by the milling rate.

RICE TERMINOLOGY

<u>Term</u>	<u>:</u>	<u>U.S. Use of Term</u>	<u>:</u>	<u>Other Comparable International Terms</u>
Rough Rice	:	Rice after harvest with hull still on.	:	Paddy
Brown Rice	:	Milled rice where only the hull has been removed.	:	Hulled Rice
	:		:	Husked Rice
	:		:	Cargo Rice
	:		:	Loonzain Rice
	:		:	Sebramato Rice
Undermilled or Unpolished Milled Rice	:	Rice from which the hulls, all or part of the germ and the outer bran layer have been removed, but not the inner bran layer.	:	
Regular Milled Rice or Milled Rice	:	Rice from which the hulls, and practically all of the germ and bran layer have been removed.	:	White Rice
Parboiled	:	The end product of rough rice which has been soaked or steamed and dried and. before being milled.	:	Boiled
Broken	:	Pieces of rice kernels which are less than 3/4 the length of whole kernels.	:	Large Broken
Chalky Kernels	:	Kernels where one half or more of the surface is white like the color of chalk.	:	
Hulls	:	The outer covering of the rough rice kernel.	:	Husks
	:		:	Chaff
Bran	:	The pericarp layer or outer cuticle and germ directly beneath the hull.	:	Cargo Meal

HOW TO INTERPRET THE DATA BASE

1. Years in parentheses in the first column represent "world" production years. The bulk of the world rice harvest extends over 6 to 8 months. Thus, world production for 1981 represents crop grown and harvested in late 1981 and early 1982 in the Northern Hemisphere, plus crops grown and harvested in early 1981 in the Southern Hemisphere. Data for 1981 and 1982 are preliminary forecasts based on information available as of August 15, 1983.
2. Years shown without parentheses represent local marketing years and generally refer to the 12-month period following the harvest. For most countries, the crop is marketed in the same year it is harvested, i.e., 1981 or 1981/82. However, in the case of some countries (notably those in the Southern Hemisphere), the bulk of production occurs in the world production year 1981, but because the crop is not harvested until early in 1982, the marketing year is designated as 1982 or 1982/83. The marketing year designation for some country series has changed over the 24-year historical period as a result of changes in official data sources.
3. Yield represents rough rice production divided by harvest area.
4. For supply-utilization balances purposes, production is also expressed in milled equivalent. Milled production is equal to rough production multiplied by the designated milling rate. Stock, trade and consumption data are expressed in milled equivalent.
5. For countries where stock data is unavailable, "total consumption" represents apparent consumption inclusive of annual stocks changes. Total consumption data include allowances for feed, seed and waste.
6. The final four columns of country data series represent calendar year trade information as distinguished from marketing year trade data. The first of the four columns specifies the calendar year, followed across the other three columns on the same line by imports from the United States, total imports and total exports, respectively.
7. In the production and trade columns, dash marks indicate nil level; dashes in the stocks column indicate that no information is available.

Do you need information about

- Overseas markets and buying trends?
- New competitors and products?
- Trade policy developments?
- Overseas promotional activities?

Then **Foreign Agriculture** — USDA's fact-filled monthly agricultural trade magazine — is for you. Based on official USDA data available nowhere else, **Foreign Agriculture** articles are clear and crisp, written to provide the export information you need, in a concise and extremely readable form.

Special information is found in **Foreign Agriculture's** telegraphed, targeted news departments: Fact File, Country Briefs, Trade Updates and Marketing News. And its tables and graphs will give you an immediate grasp of what's going on overseas.

In addition, periodic special issues—such as the one devoted entirely to value-added exports—will give you a wide range of detailed information about overseas markets.

If you use agricultural facts and figures in your business, you need **Foreign Agriculture**.

Subscribe today! Just \$16.00 (\$20.00 for foreign delivery) brings you Foreign Agriculture for 12 full months.

FOREIGN AGRICULTURE CIRCULARS

The Foreign Agricultural Service issues a number of Foreign Agriculture Circulars during the year on various commodities and export services for the food and agricultural trade, as well as specialized publications pertaining to individual commodities.

HOW TO ORDER: Check the title of each publication you wish to order. Remit a check for the total amount payable to the Foreign Agricultural Service. Only checks on U.S. banks, cashier's checks, or international money orders will be accepted in payment. **NO REFUNDS CAN BE MADE.** Mail this form to: Foreign Agricultural Service
